STRENGTH TESTING

Test provided by Lubbock Labs, LLC
Report #21490

DAYS AGED	MAXIMUM LOAD LBS	COMPRESSIVE STRENGTH LBS/SQ IN
28	38,330	3,049

Our stone is fully cured at 28 days. For best results with exterior installation, stone & mortar should be sealed with a high quality sealer that is suitable for cementitious products.

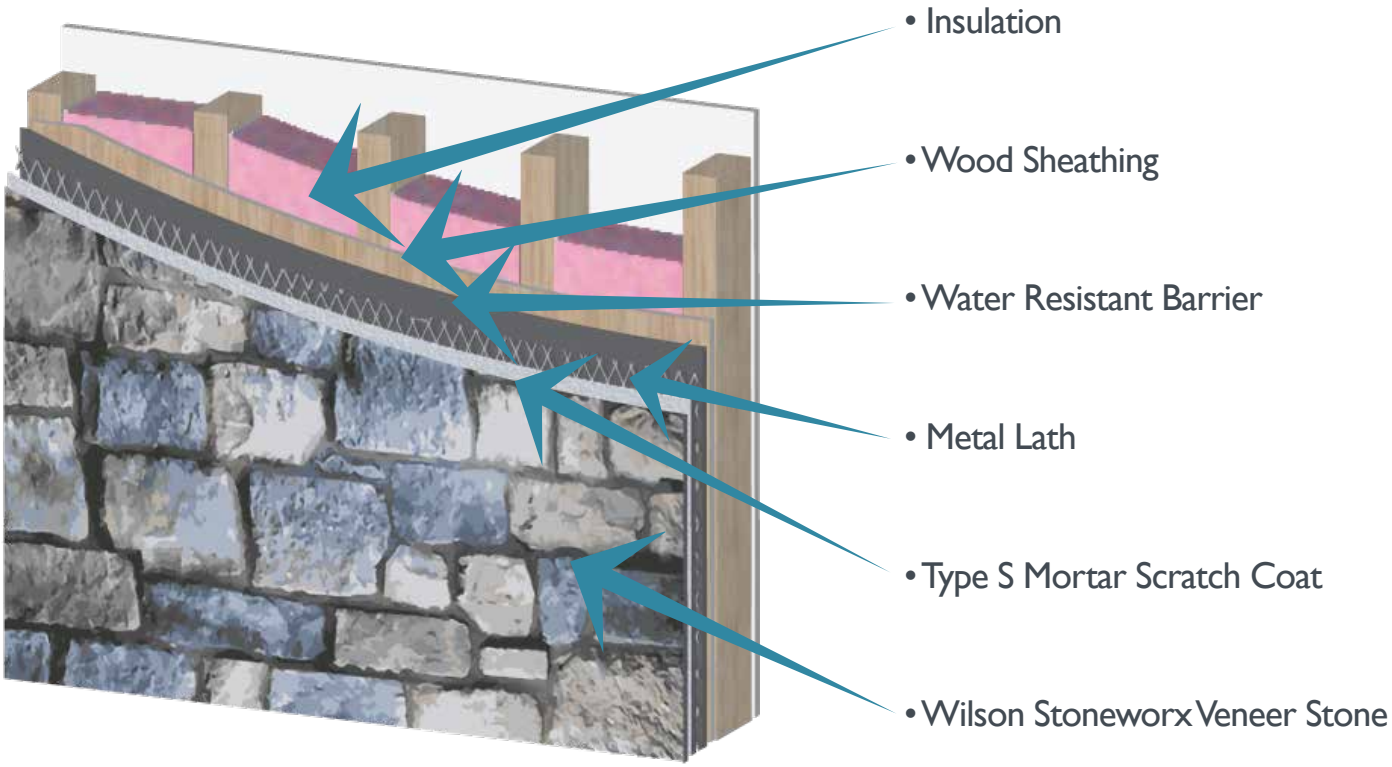
VENEER STONE INSTALLATION



To ensure proper adhesion, wash the back of the stone to make sure it is free & clear of dirt or residue. Darker colored stones may exhibit signs of efflorescence. This is normal in cementitious material and can easily be removed using an efflorescence remover or normal acid wash after the stone is installed. For additional questions contact Jason Wilson at 806-590-6045 or jason@wilsonstoneworx.com.

SAFETY INFO

Sanding, grinding, or cutting concrete can release large amounts of dust containing high levels of crystalline silica. Prolonged or repeated exposure can lead to a disabling & often fatal lung disease called silicosis. Avoid contact with dust when cutting our stone and do not breath in dust. Wear proper protective clothing, gloves & eye protection.
