### **FEEDING YOUR PUPPY:**

Your puppy currently eats Stella and Chewy Puppy, the kibble is available to them 24/7. You can mix some kibble with canned food if they are fussy at first.

There are many good dog foods, and you should feed the best one for you. Just make sure it is a high quality brand. Whichever dry kibble you feed, it should be mixed with about 1 tablespoon canned dog food.

Your puppy has not been outside our house, please keep him inside until he has gotten the last puppy shot. Puppies can pick up Parvo anywhere that other dogs have been. The puppy's Mom has also been confined to the house from one week before whelping to 8 weeks after.

It is common for a puppy to have a loose stool during his first day in a new home, due to the excitement and stress. He also may develop it due to a change in food and water (we use bottled water since we are on a well). Any continuous diarrhea could be a problem and you should see the Vet. Let the Vet know that the breeder lives in a rural area where giardia and coccidia are common. It causes loose stool, but is easily treated.

Your puppy has been wormed, and his shots are up to date. You will have to check with your Vet about any further worming that is needed. Do not panic if your puppy has worms. This is normal for puppies, as they have no resistance until they are older.

### **GOOD THINGS TO HAVE ON HAND:**

Harness  
Leash  
Tag with your phone number  
Metal Crate  
Nail Clippers & Kwik Stop  
Bully sticks, pigs ears (made in USA)  
Toys  
Bed  
Food & Water Bowl  
Potty Pads

**Dawn (blue) dishwashing soap kills fleas – Flea and Tick medications (both oral and topical) are known to cause seizures, the seizures will require a lifetime of seizure medication and can cause an early death.**

**Rabies shots are sometimes followed by a reaction that causes the dog to become aggressive – Nobivac is the vaccine with the least possibility of reaction.**

**Please wait at least a year before having the puppy spayed/neutered, they are not done growing and need those hormones to develop, many organ failure and cancers are being blamed on early spay/neuter. Waiting 18 to 24 months will give the dog a healthier life.**

**MY GUARANTEE:**

All puppies have a full health check with my Vet prior to leaving. Their shots and de-wormings have been kept up to date and they have no illnesses that I am aware of. If your Veterinarian find that the puppy is not healthy, you may return him/her immediately for a full refund. I give a handout about hypoglycemia, no refund if you fail to follow the handout and the puppy becomes hypoglycemic.

Buyer understands and agrees that the Seller is not responsible for any veterinary medical expenses incurred once the puppy has left the possession of the Seller. The puppy must be paid for in full by 8 weeks of age.

**My policy on refunds is:**

The first month is a trial period. The puppy can be returned for a full refund, minus \$500 and any shipping costs, as long as he/she has not been spayed or neutered.

For the second through sixth month, I will refund half the purchase price, minus \$500 and any shipping costs, as long as he/she has not been spayed or neutered. After six months, there is no refund, but I will always be ready to take this dog back.

By purchasing this puppy, you guarantee me that you will give him a good home, and contact me if you cannot and need help with him.

**ADOPTION CONTRACT**

Puppy: Elsa & Happy

Sex: Female - Male

Date of Birth: December 23, 2022

Color/Coat: Tri-Colored
