LARSON DENTAL

invisalign®

WHAT IS INVISALIGN

Invisalign uses a detailed 3D scan of your teeth and advanced digital planning to create a series of custom-made clear aligners. These trays apply gentle, targeted pressure to gradually shift your teeth into better alignment—improving the appearance, function and health of your teeth.

WHAT TO EXPECT

- Typical treatment times range between 9 to 18 months
- Trays are worn 22 hours per day (removing only for eating, drinking (non-water) & brushing
- Trays are switched out every 1-2 weeks as prescribed
- Mild pressure or discomfort is normal for a few days with every new tray
- Check-ins (in-office and/or virtual) are necessary to monitor progress

INVISALIGN VS. TRADITIONAL BRACES

- Invisalign is nearly invisible
- Trays are typically more comfortable than metal braces, with no wires
- Removable trays permit normal eating, brushing and flossing

GETTING STARTED

- We will assess if a good candidate for Invisalign
- A 3D digital scan and clinical photos will be taken to finalize your personalized treatment plan
