COMPOST CROWD

WHY COMPOSTING MATTERS

Rotting food in landfills produces methane — a greenhouse gas 80x *more potent* than CO_2 over 20 years

SOURCE: IPCC, SIXTH ASSESSMENT REPORT: CHAPTER 7, TABLE 7.15 – EMISSION METRICS FOR SELECTED SPECIES, 2019

IT'S SIMPLER

THANK YOU THINK

Your kitchen team separates food scraps into bins we provide. We handle the rest—regular pickups and local composting that turns food scraps into nutrient-rich compost.

FITS IN THE KITCHEN

MAKING IT PART OF THE ROUTINE

CAN LIVE OUTSIDE IF SPACE IS TIGHT

YOUR NEIGHBORS

ARE ALREADY DOING IT

SMALL CHANGES.
MEASURABLE RESULTS.!

L'AUBERGE de SEDONA

L'AUBERGE DE SEDONA COMPOSTING ENVIRONMENTAL IMPACT

269,640 lbs diverted!

Total weight we have collected from you so far!

1,759.8 seedlings planted!

Composting has a huge impact on the environment. From a greenhouse gas equivalency standpoint your composting efforts are equivalent to 1,759.8 urban tree seedlings grown for 10 years.

267,500 miles offset!

Your composting efforts are equivalent to not driving 267,500 miles. Whoa

11,925.7 gallons of gas!

The number of gallons of gasoline offset by diverting food scraps from the landfill

Statistics based on CO2E(Carbon Equivalency). This number allows us to translate abstract measurements into concrete terms we can understand, such as the emissions from cars, households, or power plants.
