CANADA'S STAKE IN A SAFER WORLD

A Case for Sustained Investment in Global Health Security

100 DAYS

Target to get a vaccine ready after a new threat vs 326 days for COVID-19

CAUSES 8 MILLION

* COVID-19 deaths that might have been prevented with 100-day vaccines

$14

Returned for every $1 invested in pandemic preparedness

$13.8 TRILLION

Stripped from the global economy by COVID-19 (15M excess deaths)

1

PREPAREDNESS WORKS

Rwanda ran a Marburg drill weeks before its 2024 outbreak. Within 10 days, health workers were in a vaccine trial and the outbreak which was up to 88% fatal was contained.

2

HIGH RETURN ON INVESTMENT

Immunization has averted 154M deaths since 1974. CEPI 3.0 costs $2.5B over five years as against the $700B+ a year future pandemics are projected to cost.

3

THE WINDOW IS CLOSING

G7 aid is set to fall 28% from 2024; Canada has cut $2.7B over four years. The 2026 G7 Summit and UN meeting are a rare chance to lead.

THE ASK

$125M over five years in CEPI 3.0

Canada should champion the 100 Days Mission as an explicit pillar of Canada's health and security policy and invest $125 million over five years in CEPI 3.0, becoming one of its leading investors.
