MICROPLUS INC. / KITCHEN DISPLAY SYSTEMS

ChefTab Bump System

Android-based kitchen display controller

Your Monitor. Our Technology. A Smarter Kitchen.

Compact. Powerful. Flexible.

Transform any HDMI monitor or TV into a kitchen display system. Includes an Android controller, fully licensed ChefTab software and a rugged 20-key USB bumpbar. Connect via Wi-Fi or Ethernet.

$699.00

Monitor / TV not included.

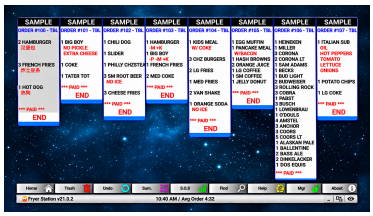
Intelligent POS integration

Connect to compatible POS systems just like a network kitchen printer. Intuitive Mode automatically converts incoming data into easy-to-read, color-enhanced orders. In most cases, little or no configuration is required.

Reliable, flexible operation

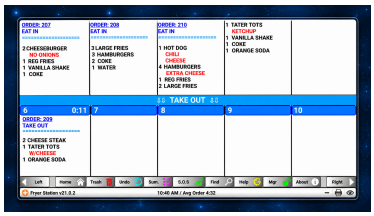
Replace kitchen printers without changing your compatible POS system in most cases. ChefTab stations can operate independently and communicate with other stations and printers. Recall bumped orders and customize display formats.

Flexible display options for every kitchen



Standard Food Prep
View 4 to 30 orders across the screen.

Traditional Screen
Organize orders in a familiar grid.



Split Screen
Separate dine-in and takeout orders.

Order Ready
Show preparing and ready orders.

Item Prep
Focus on individual food items.

Upgrade your kitchen with ChefTab Bump
