The Town of Ponce Inlet will NOT have to deactivate its ALPR cameras on A1A (S. Atlantic Avenue)

Ponce Inlet utilizes NDI tag readers, which have been in place for approximately eight years, according to the Chief of Police. We spoke with the Chief today, and the Town is carefully reviewing the issue.

The ALPR system in this town creates a VERY strong closed loop. There is essentially no way to travel past the police department without your vehicle being tracked coming in and going out.

After speaking with the Town today, we also learned something important about the roadway.

State Road A1A ends in the Dunlawton Avenue area circled on the map. South of that area, the roadway continuing toward and through Ponce Inlet is County Road 4075 (South Atlantic Avenue), as pictured.

FDOT Only required the ALPR to be removed from state road right-of-ways.

For now, the Town is reviewing the issue before determining what action, if any, needs to be taken.

Ponce Inlet stops using Flock-style license plate readers to comply with state, county directives

Published: **September 17, 2026 at 8:55 AM**

Ponce Inlet police are no longer using the town's version of Flock license plate reader cameras to comply with directives from the state and Volusia County, Police Chief Jeff Glazier said. The cameras had been in place in Ponce Inlet for about eight years. Glazier said the town is following the state's direction as Florida reviews how license plate reader systems can be used along state roads.
