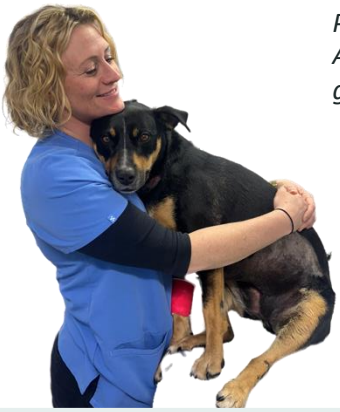
For the LOVE of DOGS ACADEMY

We have news, team

We've been rocking up to your clinic with an ultrasound machine for years now, and we want to show you what we've been building behind the scenes.

The brand new, purpose built Academy Clinic gives your patients access to CT, endoscopy, day surgery and combo workups — while you stay firmly in charge of the case. You know the pet, the family, the budget and the history. That context is gold — so you should guide which tests and treatments make sense. We exist to support the humans and animals of the veterinary community, and we heard loud and clear the need for accessible specialized care, without the usual referral process.



Pop the kettle on, have a Brownie (made by Anna's mum), read through this booklet, and give us a bell with any questions.

Cheers and thanks for having us,

Anna & the Vet's North crew

What we do at the Academy Clinic

We see the patients who need a test or procedure, not a consult. No Urgent Care, no consultations.

- CT — single region, two regions or whole body (contrast included)
- Endoscopy & biopsy — rhinoscopy, bronchoscopy, cystoscopy
- Specialist surgical procedures
- GP surgical support — the surgery nobody fancies, for a client who won't go to full referral
- Chemotherapy (starting January 2027)

Our mobile ultrasound service keeps rolling in your clinic, same as always.

Best-fit cases?

Basically, anything that needs a CT or endoscopic workup – ideally those that need them under the one GA. We get a bit special with combo workups under one GA:

Liver mass? Met check, surgical planning CT and biopsy in one go.

Chronic cough? CT, fluoroscopy, bronchoscopy & BAL.

Reverse sneezing? CT, rhinoscopy and biopsy, all at once.

The Vet's North Philosophy

GOOD for Pets

Advanced diagnostics at an accessible fixed price. Pet parents welcome to stay with worried pets up to induction and during recovery. Cohesive care coordinated by the vet team that have known them their whole lives.

GOOD for Vets

Specialist support with no competition — just partnership. We don't offer consultations with owners, keeping that role of "primary clinician" unique to you and your team. Think of us like an outpatient imaging service in the human system – refer for a test, get a report back with recommendations to work through with your client.

GOOD for People

Our partnership with For the Love of Dogs Academy means that both our clinic and our profits contribute training opportunities for people living with disability. Our graduates go on to work with animals, and get to access the healing power of pets and experience independence.

GOOD for Industry

Leadership, advocacy and workforce development for the future of veterinary and animal care. We are a training organization from top to bottom, ditching omnicompetence and perfectionism to build a healthier profession.

GOOD for You

Every referral is a contribution to something bigger. Your everyday work helps change lives. Watch the video on our home page www.loveofdogs.org.au to see what you're supporting. Enjoy the glow!

How to refer (it's easy)

1

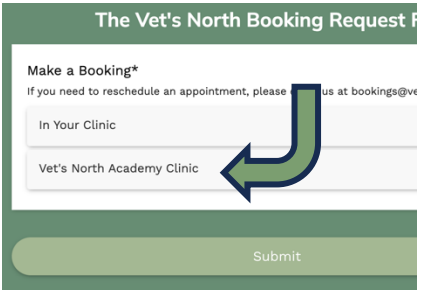
Refer online: vetsnorth.com.au/make-a-booking

Same system as a mobile ultrasound booking – Select the test or bundle you're referring for. If it doesn't fit the drop down list, make a note or call Brooke. Fill in patient and client details, we'll contact them to schedule!

2

We look after the owner

All scheduling, procedure prep, and expectation management will be done by our team.



3

We do the tests you asked for

No consults, no curveballs. The test you sent them for is the test that gets done.

4

Report lands in your inbox

1–3 business days, with our recommendations. Same familiar report structure as our existing ultrasounds. You take it from there.

Refer a patient

Mon–Fri, 9am–5pm

2 Windsor Parade, North Narrabeen

You're welcome to attend — just note your availability in the referral form.

Owners welcome. Like a human day hospital, you visit with your kid: owners can stay for induction, recovery and non-GA procedures (after a safety induction), but there's no consult.

Pricing. Fixed. No surprises.

CT SCANS — CONTRAST INCLUDED

Scan	Price
Single region	$2,200
Two regions	$2,600
Whole body	$2,800

Add-on	Price
Pre-GA echocardiogram to check it's safe	$320

Combo workups

Several tests, one anaesthetic, one price. Every bundle includes a treatment plan.

Workup	Price
Nasal CT + nasal flush + rhinoscopy + biopsies	$3,470
Chronic cough CT + laryngeal exam + fluoroscopy ± bronchoscopy + BAL	$4,610
Chronic gastro Ultrasound + endoscopy + biopsy	$4,380
Brachycephalic aerodigestive Stomach ultrasound + barium swallow (fluoro) + upper airway exam + CT ± GIT endoscopy + biopsy	$5,200
Incontinence / chronic UTI Ultrasound ± cystoscopy ± CT + biopsy/culture	$3,660

Already done the ultrasound? Knock $520 off the bundle price.

To give contrast safely we need to document normal electrolytes and renal function in the 30 days before a scan. Help us keep costs down – send us the blood results!

SAVE $520

Why so reasonable?

No emergency department, no ICU, no overnight stays. We do the tests you need, beautifully, and send everyone home for dinner. That keeps advanced care within reach for more of your clients.

Good to know

How does chemo work?

1. Diagnosis and staging via you and/or us
2. Oncologist (The Pet Oncologist or VOC) provides the protocol
3. Video call with you, the owner and us: who does what, where and when
4. Treatment with minimal stress — as much with you or at home as possible

Who does the work?

Anna Dengate oversees all clinical procedures. CT and radiology procedures are read by specialist radiologists.

Who are the Academy participants?

People living with disability, training as kennel hands, animal attendants and vet nurses through the For the Love of Dogs Academy. They're involved in every step of clinic life.

Is that safe?

Yes. Participants complete Level 1–3 safety training, training is competency-based, and someone qualified for the role supervises at all times.

What if what my patient doesn't fit one of your bundles?

Just call or email us. We can do joint taps, surgery of all sorts, CSF tap, bone marrow sampling etc. We can build a tailored bundle with you, then give the owners a fixed price for the tailored plan.

Three ways to share the good

1. Refer

50% of our profits — mobile and Academy Clinic — goes to the For the Love of Dogs Academy. Every booking quietly funds someone's training and first job in animal care.

2. Work with us

Offer work experience or employ one of our graduates. Keen, well trained and very good with dogs. Or just sign up for our newsletter and stay in the loop!

Register interest in For the Love of Dogs

3. Be a learner

Join our CPD tutorials, run a workshop for your team, and keep up with Vet's North news. No spam, promise.
