Original Research Articles

These comprehensive papers detail new research, presenting hypotheses, methodologies, results, and conclusions.

Review Articles

Review articles consolidate existing studies on a given topic, providing critical analysis without introducing new data.

Short Communications

Concise and focused, short communications deliver preliminary findings or urgent results.

Case Studies

These articles explore specific instances such as a clinical anomaly or an ecological quirk offering detailed observations and implications.

Method Papers

Focused on novel techniques or tools, method papers outline advancements in experimental or analytical approaches.

Letters & Editorials

Letters provide brief critiques or responses to published work, while editorials offer expert opinions on emerging issues or controversies.
