Magical Motors
Our Mission

We believe that every child deserves the right to mobility. We build assistive technologies for children with developmental disabilities, and creating a cost-and-time effective solution to electric wheelchairs.
The Issue

According to the CDC, 1 in 6 children in the US have a developmental disability, inhibiting them from movement.

However, pediatric power wheelchairs cost upwards of $25,000 and take up to 5 years to receive (University of Delaware).
Our Solution

We buy ride-on toy cars and modify them so children can control them with the push of a button, as opposed to a foot pedal.
Appropriate Language

**Stylized:** Magical Motors

**Website stylized:** magicalmotors.org

**What we do:** Every child deserves the right to mobility, but alternatives to already inconvenient electric wheelchairs are rare. That's where we come in. We build assistive technologies for children with developmental disabilities.
