

5 Levels of Filtration of Our Purification System

Level 1 - Sediment Filter

Removes tiny impurities such as particles and pollutants (5 microns)

Level 2 - Pre-Carbon Filter

Removes chlorine, organic contaminants, odor, color and taste in water

Level 3 - Membrane Filter

Removes heavy metals and cancerous substances. The water that passes through the membrane completely removes all contaminants, draining out all the bad chemicals and microscopic impurities

Level 4 - Post-Carbon Filter

Removes dissolved solids and odors creating the best taste of natural water

Level 5 - Ultraviolet Filter

Kills and sterilizes germs and bacteria from your water creating an additional level of filtration to assure the last polishing purity of your water
