How To **Build**

## A **Template** For A **Die**
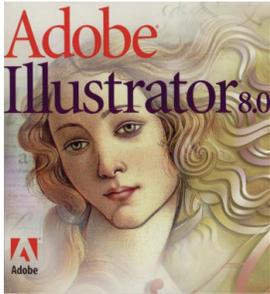

Create your Dieline
using Adobe Illustrator and
save the final .eps file as version 8 or earlier.

Is your printed piece two-sided?
Then create the dieline with the front of the piece face up.

CORRECT

Draw your cutlines in solid .5 pt rules
and make them connect at all points.

INCORRECT
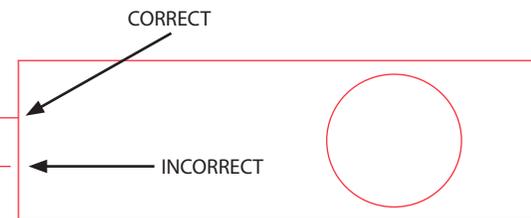

Are you placing your dieline into a layout?
Then assign it a **spot color** you are not using in your
document and set the ink to **overprint**.

Add marks for scores, perfs and corners
and assign the color as Registration.

CUT   SCORE   PERF
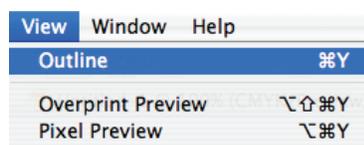

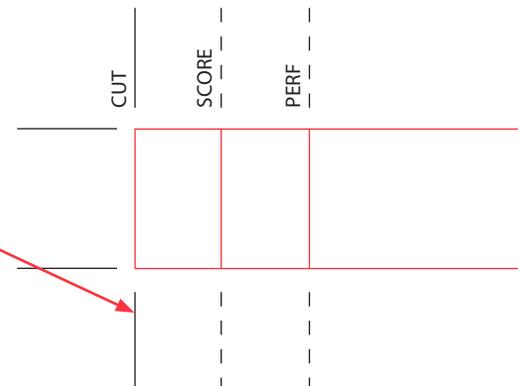

Tips:

• Create your dieline in outline view for best resolution and accuracy.
• Use as few points as possible to create your lines and curves.
• Set your preferences to enable snap-to-point and disable snap-to-grid.
• Ask your Sales Representative layout questions (multiple up, etc.) to assure your work will be correct.
