

FLUX pediatric gait trainer

The Barrier Free Design and sturdy lightweight frame construction allows for optimal freedom of movement and proper positioning over all kinds of terrain, with an astonishing load capacity of:

60 kg (132 lbs.) for size 1

75 kg (165 lbs.) for sizes 2 and 3

100 kg (220 lbs) for size 4

The innovative reverse roll lock technology immediately locks the wheel as soon as the rear wheels start to roll backwards, and can be deactivated using the lock pin, allowing it to roll forward and backward.

The height and depth adjustable handlebars make it easy to adjust to different body types and growing children, and the handlebar with universal grips (optional) allows for grip width adjustments. The quick folding mechanism with safety lock allows for easy transport and storage. Available in 4 sizes.
