# DSEA106 MKII

## AUXILIARY/SHUNT POWERED DIGITAL AVR

The DSEA106 MKII Digital Automatic Voltage Regulator (AVR) is designed to regulate the output voltage of an AC alternator. The DSEA106 MKII is supplied by either a stator auxiliary winding or a shunt system taking power from the output windings.

The DSEA106 MKII eliminates the complexities involved with analogue AVR designs. Analogue AVR designs can be over sensitive to changes in temperature which affects stability whereas the DSEA106 MKII AVR maintains a smooth, stable regulated AC output voltage regardless of the electrical load connected.

The DSEA106 MKII is simple to install and set up using either the DSE Configuration Suite PC Software and the DSE815 configuration interface or five onboard potentiometers and 4 DIP switches, combined with a status LED providing a simple user interface.

The DSEA106 MKII Digital AVR has numerous advanced features such as soft start ramping, connection for a quadrature droop CT and the ability to perform remote voltage adjustment, making it perfect for synchronising and load sharing applications.

The DSEA106 MKII Digital AVR is an ideal option for both OEM and retro-fit solutions.
