

Vision |

The vision for the scheme includes:

- Maximising energy efficiency and minimising carbon footprint to create sustainable, robust and responsible development.
- Integrating the development into the local context by meeting the needs of the community and responding to the architectural vernacular of the area.
- Reducing the demand on much needed affordable housing in the borough.
- Providing affordable housing in a highly accessible location close to services and facilities and public transport links.

Site Surveys |

A wide range of survey work has been undertaken, including a topographical survey, ecology survey, and soakaway testing. These surveys have informed the evolution of the layout and appropriate mitigation measures.
