CMX EXTENDS EXPIRY DATES FOR WARRANTS

December 19, 2023

CALGARY, ALBERTA – **CMX Gold & Silver Corp. (CSE:CXC; OTC:CXXMF)** (“CMX” or the “Company”) announces the Company has extended the expiry dates of its common share purchase warrants (“Warrants”) currently outstanding. The Warrants were issued as part of private placements in 2021 and 2022 and initially had two-year terms for exercising. On March 13, 2023, the expiry dates of the Warrants were previously extended for one year. The exercise prices for the Warrants are not below the present trading price of the Company’s shares on the CSE. Considering CMX’s present stage of development of its Clayton Silver Project and the timeline for ore-sorting the Clayton mine stockpile expected later next year, the Company concluded that it is in the best interests of the shareholders and the Company to extend the expiry date of the Warrants for one more year. No other terms of the Warrants were amended.

CMX has extended by one year the expiry dates of the Warrants as follows: 6,700,000 exercisable at \$0.10 per share extended to June 30, 2025; 3,470,000 exercisable at \$0.10 per share extended to November 19, 2025; 1,430,000 exercisable at \$0.18 per share extended to July 14, 2026; 1,972,000 exercisable at \$0.18 per share extended to September 16, 2026.

About the Clayton Silver Project

CMX’s 100%-owned Clayton Silver Property is in Custer County, south-central Idaho, a mining-friendly state. The 1,131-acre property includes the former Clayton silver-lead-zinc mine on patented claims. The Clayton Mine was developed on eight levels to a depth of 1,100 feet below surface and is comprised of approximately 19,690 feet of underground development. Two major ore bodies were partially mined: the “South Ore Body” and the “North Ore Body”.

Recorded production from the Clayton Mine included 7,031,110 oz silver, 86,771,527 lbs lead, 28,172,211 lbs zinc, 1,664,177 lbs copper, and minor amounts of gold from an estimated 2,145,652 tonnes of ore mined between 1934 and 1985 (Hillman, Bob, M.S. Thesis, June 26, 1986, Eastern Washington University).

Very little exploration has been carried out previously on the property. Significant potential is demonstrated in hole 1501-A, drilled in the mid-1960’s, which penetrated the mineralized zone at 1,425 feet. At that depth, the hole intercepted 22 feet of mineralization grading 4.07 oz (126 g/t) Ag, 5.75% lead and 5.37% zinc (note: true width is unknown).

Forward-Looking Statements Advisory

This news release contains statements concerning the exploration plans, results and potential for recovery from the stockpile and other mineralization at the Company's Clayton Silver Property, geological and geometrical analyses of the stockpile and comparisons to historical production and other expectations, plans, goals, objectives, assumptions, information or statements about future, conditions, results of ore sorting or performance that may constitute forward-looking statements or information under applicable securities legislation. Such forward-looking statements or information are based on a number of assumptions, which may prove to be incorrect.

Although CMX believes that the expectations reflected in such forward-looking statements or information are reasonable, undue reliance should not be placed on forward-looking statements because the Company can give no assurance that such expectations will prove to be correct. Forward-looking statements or information are based on current expectations, estimates and projections that involve a number of risks and uncertainties which could cause actual results to differ materially from those anticipated by CMX and described in the forward-looking statements or information. These risks and uncertainties include, but are not limited to, risks associated with geological interpretation and analysis of the ore sorting results, the ability of CMX to recover all or any portion of the mineralization present in the stockpile, the extent to which the samples represent a uniform distribution of the recoverable ore in the stockpile, CMX's ability to exploit the stockpile economically, the likelihood of exploiting the stockpile in a timely manner or at all, CMX's ability to obtain financing, equipment, supplies and qualified personnel necessary to exploit the stockpile and the general risks and uncertainties involved in mineral exploration and analysis. The forward-looking statements or information contained in this news release are made as of the date hereof and CMX undertakes no obligation to update publicly or revise any forward-looking statements or information, whether as a result of new information, future events or otherwise, unless so required by applicable securities laws.
