

T 鐵芯插入機系列 Transformer Lamination Stacking Machine

研發製造台灣第一部變壓器專用鐵芯插入機，多年以來積極研發改良各式新產品，為客戶生產最佳、最堅良的機器設備。

本機採用「傳動裝置」設計，當變壓器線包插片堆疊至標準數量後，機器本身自動形成空轉，矽鋼片立刻停止送出；避免繼續送片造成矽鋼片彎曲耗損，節省製造成本。

本機藉由「卡抵器」設計，防止矽鋼片倒退片及卡片現象，對提高工作效率有很大助益。

EI Lamination Stacking Machine
from Taiwan since 1972

manufactured Taiwan first set of Transformer Lamination Stacking Machine, persistently researched and developed several new products, manufacturing the best quality and reliable machines and equipment for customers.

This machine is with "Transmission device" design, when the machine stacked the lamination sheet into the winding bobbin, reach the standard sheet quantity, the stacking machine will stop sending the lamination out from the nest, avoid the lamination to be bent and damage the winding bobbin, save your money.

The "Stopper device" design protect the lamination turn back and jammed, will increase your performance.
