# Delivering superior cleaning solutions without compromising **people, planet and performance.**

At InnuScience, we always knew that we have to take a different approach when creating cleaning products. We firmly believe that we must work with nature, not against it. That is why InnuScience has committed over 30 years to explore, understand, and learn from nature to develop high performing cleaning solutions that have already helped thousands of businesses across the world to improve their cleaning practices.

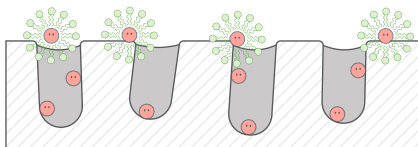

## The power of biotechnology

Our biotech products contain microorganisms (bacteria & enzymes) that target and clean different types of dirt (grime, grease & organic matter) in a safe, environmentally friendly and effective way.

Unlike traditional chemicals, the microorganisms in our products clean deep down into the surface ensuring a complete clean by breaking down and removing all the dirt and odour at the source.

They provide continuous cleaning action that keep the surface cleaner for longer. All this while having the least amount of harm to you and the environment.

## Why choose InnuScience

Superior  
cleaning  
performance

Competitive  
affordable  
pricing

Safe solutions  
for People &  
Planet

## InnuScience Benefits

- ◇ Powered by bacteria & enzymes
- ◇ Sustainable and easily biodegradable
- ◇ Highly concentrated
- ◇ Safe for users and surfaces
- ◇ Free from hazardous toxins
- ◇ VOC free
- ◇ Not tested on animals
- ◇ pH Neutral

Ultra concentrated solutions that are affordable whilst **significantly reducing your plastic waste and carbon footprint.**

Did you know that with just one 5L of our super concentrated Nu-Multi Kleen, you can make 1007 refill trigger bottles reducing over 85kg in packaging waste.

Join us in our mission to create a cleaner, healthier, and more sustainable world.
