

AquaSpy®

Intelligent Soil Moisture Monitoring
EASY | AFFORDABLE | ACCURATE

PAY AS YOU GROW!

Crop Health Monitoring On-Demand

Crophesy™ is a pay as you grow service brought to you by AquaSpy® that accurately predicts crop health and yield through our intelligent soil deciphering algorithm.

With Crophesy, farmers can use a smartphone to remotely monitor vegetables and other shallow to medium root crops and plants and see stats on soil moisture, soil density, salinity, and temperature, as well as water infiltration and consumption.

Crophesy gives crop-specific data:

Soil Moisture at Root Level

Electrical Conductivity/Salinity

Root Depth

Soil Temperature

Last Irrigation

Statistical Algorithms

Crophesy multi-sensor wireless probes placed throughout vegetable fields give farmers a broad, field level view with crop-specific insights about soil and crop health. Each sensor represents 4 in/10cm of depth.

Data is automatically interpreted through sophisticated statistical algorithms and then uploaded to the Crophesy Mobile App. Download the Crophesy Mobile App from the Apple App Store (iOS) or Google Play Store (Android). Use the app daily to receive notices about where you need to focus your attention.

Crophesy wireless, battery-powered probes are rugged, easy to install and work all season long.
