Site Visits

Come to your facility and do a site visit to learn about your business and provide professional direction for your security and safety requirements.

Consolidation of Disparate Systems

Review all systems and make suggestions on migration path forward to consolidate to a single system platform that best suits your security & safety requirements. Look at investments in existing systems and how to best utilize them.

Conceptual Design

Develop plan drawings and riser diagrams along with estimated cost for systems and additions allowing you to be prepared for going out to bid or comparison to proposals submitted.

System Recommendations

For sites that want to change platforms we can offer manufactures that would best fit your requirements and future growth. Also, other system integrations that may also work with your systems solution.

Cost Studies & Value Engineering

Review system cost and make recommendations for value engineering to save project costs.

System Mapping

Develop plan drawings and convert to maps that will be used in your systems for device reference and navigation of security devices.

Standards & Specifications

Develop new and/or review and update existing.

AUDITS & INSPECTIONS

Security Audits

A security audit is a **systematic evaluation of the security of a company** by measuring how well it conforms to an established set of criteria. A thorough audit typically assesses the security of the system's physical configuration and environment, software, information handling processes and user practices.

Security Safety Inspections and Testing

Workplace security inspection is an important component of maintaining and improving the existing security system in place. A workplace security inspection checklist helps in pointing out those areas that require immediate attention and in testing out newly implemented security measures as well.

QA/QC Compliance & Commissioning

Quality control and quality assurance will ensure that the systems are complying and installed in the best practice manner possible. System commissioning takes place as security components come online and ae being used as well as an overall device and project sign off documentation. Warranties will also be documented on these systems and devices.

Project Inspections

Routine on site project inspections to ensure that all systems installations and being meet per drawings and specifications. Inspection reports are sent to end user representative with any action items.
