IB PVC Roof Systems, A Better Choice. With easier installation, less time and labor costs, longest warranty, lowest maintenance and most durable membrane, coupled with the best technical and product support team - IB Roof Systems is the right choice.

TPO

vs.

IB-PVC

- **UNPROVEN**
Failures and formulation changes within the TPO industry resulted in premature roof replacement due to deterioration.
- **PRICE DRIVEN**
Many cheap manufacturers with formulas that are low-quality driven
- **TIME-CONSUMING**
Need to seal cut edges and install a t-joint patch on 60 mil or thicker
- **INCONVENIENT**
A less proven roofing system (TPO) can increase maintenance expenses and is time consuming.
- **VULNERABLE**
Ponding water can accelerate TPO deterioration and is typically excluded from warranty.
- **DIFFICULT TO INSTALL**
Typically more rigid and difficult to seam. Poor performing seams and cold welds result in leaks and early failure.
- **DIFFICULT TO MAINTAIN**
Aged membrane surface is difficult to re-weld and/or patch.
- **LESS FIRE RESISTANT**
TPO is not naturally fire resistant and is susceptible to promoting flame spread

- ✓ **RELIABLE**
Nearly four decades of proven performance history from IB Roof Systems results in significant cost savings
- ✓ **VALUE DRIVEN**
IB Roof Systems PVC provides the best membrane coupled with complete solutions
- ✓ **LESS WORK**
No edge sealing and T-Joint patches only required on 80 mil membrane.
- ✓ **PREDICTABLE**
The time proven performance of IB Roof Systems reduces the need for costly repairs.
- ✓ **DURABLE**
IB PVC membranes are uniquely formulated to withstand ponding water. Ponding water is not excluded from the IB warranty.
- ✓ **RELIABLE**
Aged membrane can be cleaned and re-welded and/or patched well into the life of the product.
- ✓ **CONSISTENT**
Heat welding PVC is easier and more consistent offering greater reliability for owners and contractors.
- ✓ **SAFER**
PVC is naturally fire resistant during and after installation for the safety of contractors and building owners

With so many manufacturers of TPO and the evolution of the materials and formulations, TPO just has too many risks for long term use, quality and lasting roofing projects.
