Dear Colleagues,

I have been a practicing physician for 42 years. With extensive experience in Family, Emergency and Nuclear Medicine, almost all of my current Regenerative Medicine patients are old, disabled, and /or suffer chronic and painful conditions.

My patients often benefit from pool therapy, such as was offered at the Mickelson Arthritis and Rehabilitation Center. Absent such therapy many patients decline in function and suffer more. Because of the warmth, gentle resistance of water, less impact, and buoyancy, the warm water pool at Mickelson is the type of resource my patients need. The Mickelson therapy pool benefits a wide array of problems and has been a tremendous resource for many.

I urge you to re-open the warm water pool at Mickelson.

Sincerely,

  
Edgar A Suter MD

UC Davis School of Medicine '79
