

Educational model

Organic and natural learning, through projects and workshops that arise from the interests of our students.

Research and activities; according to the needs of the students. We promote the development of critical thinking, creativity, communication, teamwork, and many other life skills.

Active learning

Our students are participants and main subjects in their education.

They are invited to investigate, inquiry, test and learn from their mistakes.

Each project is born from the combination of the students' interests and learning needs.

Physical environment

Organized in flexible and common work areas. In an environment with freedom of movement.

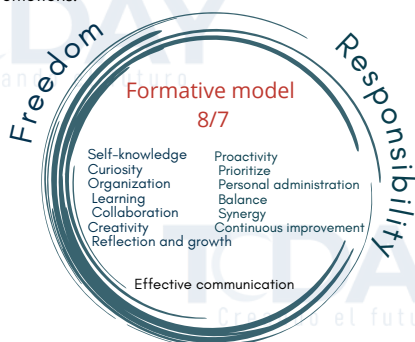

The school is an extension of their home, a comfort zone in which they feel relaxed and that invites them to create, participate and belong.

Assessment

It is a guide to detect progress and areas where adjustments need to be made. The tutor carries out a continuous evaluation that is combined with a self-evaluation that each student performs with the purpose of supporting the development of self-knowledge and learning, and to become aware of their progress.

Tutoring

The relationship between the student and the tutor is close. With the support of the tutor, we seek to motivate and stimulate students to awaken the skills that allow them to learn without falling into forced learning, and to understand and manage their emotions.

Development of Today's talent areas

Activities develop 56 specific skills that are essential to meet Today's educational needs.

These 56 skills are grouped into 4 main areas:

- Cognitive
- Intrapersonale
- Self-leadership
- Digital
