

Surgical Laser

The Shaughnessy Veterinary Hospital is pleased to announce the arrival of aesculight state of the art surgical laser technology!

What is laser surgery and what are the advantages?

Traditional surgery with a scalpel or scissors can bruise or crush tissue.

When we use the laser, only an intense beam of laser light touches your pet.

The laser has the unique ability to vaporize or “erase” tissue and it can be used to make incisions as well as to erase unhealthy tissue.

The laser seals nerve endings, so patients are much more comfortable during and after surgery.

The laser kills any bacteria in its path which can mean reduced infections post-operatively.

It also seals lymph and small blood vessels, so there is less swelling and bruising after surgery.

Our practice has made this substantial investment in order to offer you the best possible healthcare for your pet.

Dr. Montgomery will be able to tell you if your pet is a candidate for laser surgery and will help you decide if this is the best treatment option for your pet.
