

# Elegant & Luxurious Stainless Steel Solution

Luxurious and Eco-Friendly Solution by DSP "VERNOX"

## Company Introduction

### Why is Etching Process so Not Green?

Greetings, Sir/Ma'am?

We are **DSP** from South Korea who has supplied world-class Stainless Steel Coils / Sheets to different world-class partners.

If we have fascinated your interest, Please bear with us and proceed to the following.

## Why VERNOX?

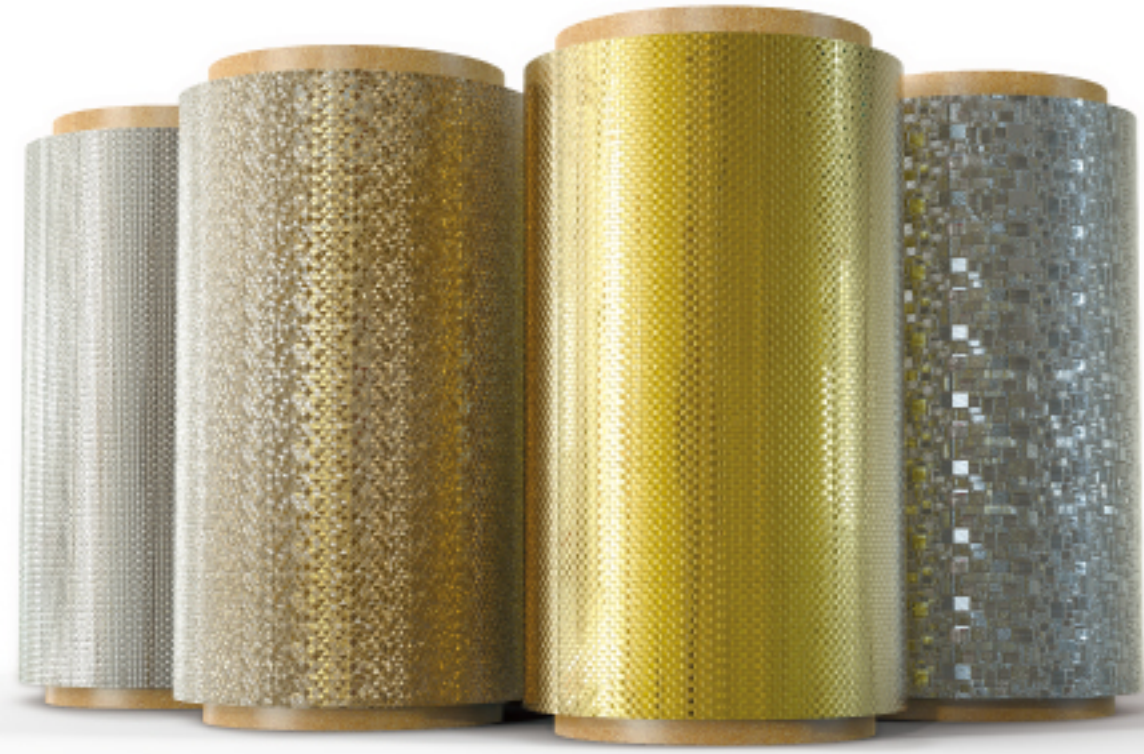

For the **Exotic and Luxurious Texture**, there are No Other method better than applying the Extra-Ordinary Patterns "Engraved" on the Surface of the Stainless Steel Sheets.

For that Exotic value, **DSP** came up with the "**VERNOX**"; The **Embossed Laminated Stainless Steel Sheets**.

## Why is it GREEN?

Every VERNOX Products from DSP uses ONLY the Cold Rolling with Embossed Rolls, instead of Chemicals (i.e. Acid).

Most commonly used Etching Methods were Chemical Etchings, which has been shifted to extinct with its difficulties in disposal of toxic wastes.
