

Sandy's Driving School

Bay park 2 (diagonal)

1: Get the line furthest away from you of the bay you want to park in half way across the passenger side window (see picture one).

2: Check it's clear all around, especially to your right then move slowly and full lock to the right so the car swings out diagonally across the lane, adjust steering if needed. Keep moving to the right until you see picture two in the blind spot mirror or you can watch the line in picture one as it goes into the back passenger window and across it until you can't see it anymore then stop the car.

3: once you have your reference in picture two straighten the wheel and stop. Check all around, start to move in reverse and do one full steer to the left, if the reference is perfect this should get you in the bay but you can adjust the steering as you're reversing as needed (remember you steer the way you want the car to go NOT OPPOSITE).

4: once in the bay make sure you straighten the wheel and that no wheels are touching any lines.
