### TERMITES IN CLOTHES?

This occurs when a Closet or Almira that is kept closed for an extended period of time has a high humidity level.

### PREVENTION!

Try to maintain your Closet and Almira tidy and clean once a month, and avoid using any other insecticides or marketable chemicals. To stop the infection, **contact m/s COOMAR PEST MANAGEMENT SERVICES right away.**

### TERMITES IN KITCHEN?

Many of us ignore this situation because we think it's just a water leak and attempt to prevent it because it occurs when there is a water leak and this attracts termites for rapid breeding. Additionally, this issue has repeatedly shown to be the origin of termite infestations. This scenario has the potential to spread throughout the house and cause property damage.

### PREVENTION!

To eradicate the infection, attempt to remove the wood structure, check for water leaks, proceed with the water proofing operation, and **contact m/s COOMAR PEST MANAGEMENT SERVICES right away.**

### **TERMITES IN WOODEN RACKS AND TELEVISION SHELVES?**

When we attempt to eliminate termites using other readily accessible household goods, the termites' activity doubles twofold, spreads quickly, and they attempt to consume as much food as possible.

### **PREVENTION!**

Stop using low-quality, readily available items right now because they could seriously damage your house. To stop the infection, contact m/s **COOMAR PEST MANAGEMENT SERVICES** right away.

### **TERMITES IN WINDOWS AND DOOR FRAMES?**

This occurs when we ask our carpenters or painters to apply paint to damaged areas without first treating the region or simply by spraying readily available products from the market. Under the paint, termites eat and leave their traces.

### **PREVENTION!**

Avoid using other products or any form of home cures as this could shorten the lifespan of structures and result in broken windows, doors, and door frames. To stop the infection, **contact m/s COOMAR PEST MANAGEMENT SERVICES right away.**

### **RAREST OF THE RAREST SITUATION AFTER TREATMENT?**

Condition developed following termite control. It is an uncommon circumstance in which termites emerge from constructions following treatment in order to breathe fresh air due to suffocation inside the structures.
