

INCREASE HAUL ROAD SAFETY & PRODUCTIVITY

- No more looking for your turning point.
- No more second guessing where to go.
- No more turning at the next intersection to go back.
- Simply follow the road like it was the day time.
- The CDMI Guidance System was designed to be seen from a great distance during the day or night.
- Operators can plan their actions from hundreds of meters out.

GET TO KNOW US

Ian Dennis and Anthony Young have been in the mining industry for a combined 22 years in a number of different roles. From this experience they have created the Patented Mining Guidance System and associated products to improve driving guidance in all areas of site.

CDMI AUSTRALIA GUIDANCE SYSTEM IS SIMPLE TO USE.

Using your current Site Traffic Management Plan, install the posts as required in either one meter lengths for centre bunds or two meter lengths for outer edge of haul roads to highlight intersection traffic flow. The configuration is up to you. CDMI Australia Guidance system is not limited to just haul roads. We not only offer white standard guide posts, but Green for light vehicle access roads and yellow for haul truck access roads.

DEVELOPMENT OF CONCEPT

Two years of Design, Industrial, Chemical and Electrical Engineers have helped to bring this innovative product to life. No stone has been left unturned. Multiple Proof of Concept Prototypes being trialed in real world conditions on site with all four seasons throwing their best to make this product the best it can be.

DELINEATE A BLAST PATTERN

Use the Green light/medium vehicle guidance poles for your blast pattern access and Red poles for the blast pattern perimeter. This will significantly increase visibility to all mine site personnel.

IDENTIFY BODIES OF WATER

The Blue guidance poles will clearly identify any bodies of water on site. Place the Blue guidance poles at either end of a water pipe under a haul road. You may have water pipe along the side of a haul road. Use to identify in pit sumps or bodies of water under a high wall. Access points to dams or water filled drains.

CDMI Guidance System provides an illuminated roadway which is easy to follow at night"

POLES COME IN

- White (red & silver reflective sticker)
- Yellow (yellow reflective sticker)
- Green (green reflective sticker)
- Red (red reflective sticker)
- Blue (blue reflective sticker)

OUR PRODUCTS SPECIFICATIONS

Solar Light

- Flash function
- Low battery flash mode at 30% charge
- Light colours – white, red, green & yellow
- Light directional lens

Guide Post

- Designed in one meter lengths
- Directional One-way threads
- Can be Joined to any length
- Locking blister
- Custom UV resistant dye
- Recessed 3M Diamond Grade reflective sticker
- Ribbed at joint for extra strength
- Recyclable
- Can be manufactured to be bio-degradable
