

# Bleachers and Platforms

**Bleachers**  
 requires minimal  
 used position.  
 fits into a  
 or under a  
 allows for  
 and strength  
 antilever, still  
 single step rise  
 balcony.  
**Bleachers**  
 open and close  
 y to other  
 floor  
 e stacked

unit divides the room in two  
 when not in use. The back  
 of the bleacher becomes a  
 divider wall.

## Telescopic Platform Chair Seating

Sheridan offers the sturdiest  
 free-standing understructure  
 available with the versatility  
 to choose from several  
 different chair styles.

## Floor Attached Bleachers (Freestanding)

Where it is not possible to  
 attach the bleachers to the  
 wall, we incorporate a  
 heavy-duty rear row  
 structure to permit floor  
 attachment of these  
 freestanding units.

Floor attachment is also  
 used for reverse fold  
 bleachers where the  
 attachment is made at the  
 first row and the units  
 open and close the  
 opposite way.

## Tapered Sections (Pie Shaped)

This style is used in round  
 buildings permitting  
 spectators to face the  
 action without turning  
 (hockey rinks, football  
 fields, etc.).

## Portable Bleachers

This unit is used where no  
 permanent attachment  
 point is available or  
 multiple configurations  
 are needed within the  
 facility. Using the portable  
 lift carts, the entire  
 bleacher can be moved to  
 various locations.

## PLASTIC SEAT MODULES

Comfort curved, anatomically designed,  
 textured, durable molded plastic seats  
 in 12 colors to match facility or school  
 colors. Seat depths of 10" or 12".

## WOOD SEATS

The classic Southern Yellow Pine seat  
 board is a proven, durable bleacher  
 seat. Each board is triple sanded with  
 two coats of semi-gloss polyurethane.
