

Meridian Stress Assessment

The Equine Acupoint Screening Platform (ASP) builds on a synthesis of more than 3000 years of Traditional Chinese Medicine history and 50 years of Electro-acupuncture according to Dr. Reinhard Voll, Bio-resonance, Electro-dermal Screening and Meridian Stress Assessment development.

Dr. Voll's original research confirmed the location of many acupuncture points and provided a set of assessment methodologies, creating the foundation of Meridian Stress Assessment.

This provides the ability to not only assess the relative state of an acupuncture point, but, through filtration records, scan for potential balancing items or compounds as well.

The Equine Acupoint Screening Platform

A few years ago Litton Bio set out to create the most complete Equine Meridian Assessment platform imaginable. Achieving this goal required mapping the horse, locating and describing the location of hundreds of points. It also required locating every bacteria, virus, mycoplasma, parasite etc. suggested to plague the equine species.

Litton Bio decided to marry the finest in Meridian Stress Assessment hardware and software technology with the most extensive point and filtration library ever assembled on any species other than man.

The Equine ASP was produced to provide the practitioner with the most advanced means of point assessment possible.

Accurate Point Location

Accurate point location is supported by transparent layer imaging of each point on the equine body. In hand, with a push of a button, is a point finder for scanning an area on the horse for precise point location. The Equine ASP master point library contains more than 500 points, their locations and associations.

All human points are provided on the BioMeridian™ MSAS® -Professional system as well. Additional points may also be added to the system.

Baseline Evaluation

Precise point location provides for an accurate baseline evaluation through any number of assessment profiles of selected points. A standard baseline assessment can be performed in about 15 minutes.

The creation of other custom libraries again allows for quick customizing of other assessment point lists. With accurate baseline evaluation, primary points of disturbance may be revealed, along with an all systems profile.

Balancing and Filtration

Our Equine Filtration Module updates and integrates a complete library of more than 180 equine bacteria, parasites and viruses with BioMeridian™

MSAS® - Professional system virtual library database. Points may be scanned through allergen, toxicity, viral, bacterial and other filtration as well as against any product from any product line.

Advanced Applications

With Nexus peripheral technology, the Equine ASP becomes a base platform that allows for infinite customization from an already unbelievably extensive filtration base. The reference signature of any material in tangible form may be recorded into the system through the Nexus device.

The Equine ASP and BioMeridian™ MSAS® - Professional set a peerless standard for base line and relationship assessment of the equine individual. No matter how you currently work, Equine ASP can revolutionize the way you take and treat a case... every case. Each animal is a unique individual. Now you can treat them that way. With Equine ASP you have a finger on every point, at least 14 of them, at most, more than 500. So next time, go ahead and ask the question, any question, every question. Each answer is only a few seconds away.

The Equine ASP is not intended to prevent, diagnose or treat illness or disease.
