Date of Conversation: 9-26-95 **Time:** 11:30 a.m.
Bureau Staff: James W. Berg **Title:** WMSIII
Other Party's Name: Larry Lackey **Telephone:** (802) 223-7045
Affiliation/Company: NCES
Site: NCES Trudeau Landfill

SUMMARY OF CONVERSATION

Larry Lackey called to inform the Department of waste found outside the limits of the Stage 1, Phase 1 liner system during the location of the Stage 1 anchor trench in preparation of deploying the liner for Stage 2, Phase 1. Doug Casella is removing the waste and cutting the slopes back to approximately 2:1 in this area to get the waste back within the footprint of Stage 1. A report will be submitted by NCES addressing the location, quantity, where the waste was disposed, and the regrading of the side slopes of Stage I, Phase 1.

I had a follow-up conversation with Doug Casella regarding this issue. The volume of material outside the liner is approximately 500 yds. The area is 2-3 feet by 100 feet with a bow of about 6 feet in the middle. The waste is being relocated to the working face of the landfill. Waste contains 75% soil 25% waste. Material is being pulled back from the liner berm. The laterals on the 400 series monitoring wells to be left under the landfill are to be installed Thursday and Friday.
