## Introduction and Study Scope of Analysis

Granite State Landfill, LLC. is evaluating an existing industrial site located primarily in Dalton, New Hampshire for use as a solid waste disposal facility, including support infrastructure and renewable energy projects. The site has NH 116 frontage in the Town of Bethlehem and is accessed by an existing site road, Douglas Drive (See **Figure 1**).

This Traffic Study has been prepared in response to discussions at the February 20, 2020 Scoping Meeting for Traffic Impacts of Development at the New Hampshire Department of Transportation (NHDOT) office in Concord. According to discussions at that meeting the following items shall be included in the Study (see **Appendix** for notes and attendees):

- Study Area: The study will include the site driveway / Douglas Drive at NH 116 in Bethlehem and the intersection of US 3 and NH 116 in Whitefield.
- The traffic analysis at the study area intersections should be focused on safely accommodating the proposed trucking traffic and would include turning lane warrants (based on NCHRP methodologies) and truck-turning templates. Although traditional capacity analysis is not necessary at the intersection of Douglas Drive at NH 116, it may be useful in evaluating possible design improvements at the intersection of US 3 and NH 116 in Whitefield.
- Analysis Periods: Weekday AM and PM.
- Opening Year / Future Year: Assumed to be 2023 / 2033
- Background growth / other development: Use 1 percent average annual background growth rate. No other background developments were identified.
- Site Trip Generation / Distribution / Pass-by: An approximate trip generation of  $40\pm$  trucks per day on an average day and  $90\pm$  trucks/day on a busy (peak summer day) was provided by Casella, based on current operations at the NCES Bethlehem site. Truck transaction data at the existing site will be examined (including the vehicle classification) to provide a detailed estimate of trip generation at the proposed facility during peak summer conditions.
- Traffic data at the site driveway for the existing uses (gravel pit, asphalt plant, dragstrip) will need to be collected or estimated.
- Design Considerations: NHDOT indicated that the traffic engineer (T.Y. Lin International) should give consideration to the (high) percentage of trucks when examining the need for turn-lanes.
- NHDOT requested that the proposed facility provide adequate internal queueing storage to accommodate trucking demands on site.

## Existing Traffic Volumes

Existing traffic volumes along NH 116 in the vicinity of Douglas Drive were obtained from two sources. NHDOT conducts periodic traffic counts and according to their database the Average Annual Daily traffic volume on NH 116 in the vicinity of the site was 5,000 daily vehicles in 2015 (the count was performed at the Bethlehem town line). From an analysis perspective the focus is on peak hour conditions and for this study it has been identified as the Weekday AM and PM peak hours. Peak hour traffic volumes on NH 116 at Douglas Drive were estimated according to a traffic count conducted in Whitefield. 12-hour intersection turning movement counts were

performed at the US 3/NH 116 intersection on September 12 and 13, 2019 (see **Appendix**). Based upon the traffic counts the following AM and PM peak hour volumes were recorded on NH 116 south of US 3.

- Thursday September 12, 2019
  - AM Peak Hour (7:00-8:00AM)
    - NH 116 northbound = 189 vehicles
    - NH 116 southbound = 355 vehicles
  - PM Peak Hour (3:00-4:00PM)
    - NH 116 northbound = 372 vehicles
    - NH 116 southbound = 275 vehicles
- Friday September 13, 2019
  - AM Peak Hour (7:00-8:00AM)
    - NH 116 northbound = 182 vehicles
    - NH 116 southbound = 320 vehicles
  - PM Peak Hour (3:00-4:00PM)
    - NH 116 northbound = 357 vehicles
    - NH 116 southbound = 247 vehicles

## Site Generated Traffic Volumes

To estimate traffic generated by the proposed project existing traffic information was obtained from the North Country Landfill site in Bethlehem. **Tables 1 and 2** document recorded truck traffic volume from the North Country Landfill site.

**Table 1**  
**Vehicles Scaled over 22 business days of July 2019**

Vehicle Type	Hour Vehicle Scaled Into the Facility								
	6 - 7 AM	7 - 8 AM	8 - 9 AM	9 - 10 AM	10 - 11 AM	11 - 12 PM	12 - 1 PM	1 - 2 PM	2 - 3 PM

<b>Hourly</b>	7	12	7	9	10	12	11	9	6

The proposed landfill operation is expected to average about 102 truck trips per day (20% above the Bethlehem fill rates), of which 50 trucks would be larger vehicles such as 18 wheeler semi-tractor trailers (FHWA WB-67 type). The landfill is expected to operate from about 6:00AM to 5:00PM during weekdays and some occasional Saturdays, with traffic intentionally spread out throughout the day to aid in quick, efficient unloading operations. During a peak hour about 18 vehicles would be expected to enter and 18 vehicles exit. This level of traffic is only a 3.8% increase in the AM peak hour and 4.9% in the PM peak hour northerly from Whitefield on NH 116.

The routing of trucks to and from the site was based upon origins and destinations to and from I-93 and most appropriate non-interstate routing considering community impacts and roadway infrastructure constraints. The proposed truck route for origins and destinations to and from the south on I-93 is via Exit 35 on I-93 to US 3 northerly and to NH 116 in Whitefield. The truck route for origins and destinations to and from the north on I-93 (and I-91) is via Exit 40 on I-93 to US 302 easterly, to US 3 northerly and to NH 116 in Whitefield. A graphic depicting the proposed routing plan is provided in the **Appendix**.

There will be some localized vehicles that originate from the greater Littleton area from the south on NH 116. Anticipated **daily** landfill related traffic originating from NH 116 from the south includes:

- Front Load/Rear Load/Side Load: 8 vehicles
- Roll Off: 8 vehicles
- Utility Vehicle: 5 vehicles
- Deliveries (ups/napa/wb mason, etc.): 3 vehicles
- Fuel Delivery: 1 vehicle
- Total Daily: 25 vehicles (or 3 vehicles entering and 3 vehicles exiting during a peak hour)

**Figure 2** depicts the Weekday AM and PM peak hour Site Trip Generation volumes generated at the NH 116/Douglas Drive intersection.

## Future Build Traffic Volumes

Future traffic volumes at the site driveway were estimated based on existing landfill generated traffic volumes at the North Country Landfill site and background traffic growth on NH 116 (per direction at the scoping meeting an annual growth rate of 1% was assumed).

### ***Existing Site Traffic Generation***

The site is currently operated as a commercial/industrial facility that includes two sand and gravel mining operations, a rock quarry, processing of roadway gravels and stone, and an asphalt plant. The owner lives in a house on the property. The site is also permitted for a drag strip, although construction is not complete, and the project is dormant. The owner has a driveway permit which is provided in the **Appendix**. Facilities are active about 30 weeks a year, with about 50 round trips a weekday for trucks hauling soil and asphalt materials. The site owner indicates the site has a permit for 200 to 250 trips per day, or 1,000 trips per week, to account for traffic associated with the business operations and drag strip. Given that this Study is evaluating traffic during the Weekday peak hours, only traffic associated with the commercial/industrial facility was included. For the purposes of the traffic analysis it was assumed that 5 trucks enter, and 5 trucks exit during the Weekday AM and PM peak hours.

### **Background Growth**

The project is anticipated to open in 2026 and the analysis assumes a 10-year future volume scenario. The existing traffic volumes recorded in 2019 were increased by 17% to estimate base 2036 traffic volumes. The following presents the future volumes

- AM Peak Hour (7:00-8:00AM)
  - NH 116 northbound = 189 vehicles x 1.17 = **221 vehicles**
  - NH 116 southbound = 355 vehicles x 1.17 = **415 vehicles**
- PM Peak Hour (3:00-4:00PM)
  - NH 116 northbound = 372 vehicles x 1.17 = **435 vehicles**
  - NH 116 southbound = 275 vehicles x 1.17 = **322 vehicles**

**Figure 3** depicts the 2036 Build Traffic volumes during the Weekday AM and PM peak hour at the NH 116/Douglas Drive intersection.

## Site Driveway Design Review

The key design elements that were reviewed for the proposed project to ensure safe and efficient movements entering and exiting the site included the need for turn lanes (left-turn and right-turn deceleration lanes), sight distance and internal truck queue storage to address waiting trucks.

### ***NH 116 Left-Turn Lane***

Left-turn movements entering the site are anticipated to be minor. As noted on **Figure 3** only 7 vehicles are anticipated to turn left during the AM peak hour and 7 vehicles during the PM peak hour. Per discussions with NHDOT staff, the evaluation of the need for a dedicated left-turn lane was based upon guidance contained in the publication National Cooperative Highway Research Program (NCHRP) 457. **Figures 4 and 5** depict the warrant threshold (for 60MPH) contained in the NCHRP 457 report and as noted a left-turn lane on NH 116 is not warranted.

### **NH 116 Right-Turn Lane**

Given the proposed truck routing plan, a right-turn deceleration lane is proposed. The design of the lane is based upon guidance from the publication A Policy on Geometric Design of Highways and Streets, 8<sup>th</sup> Edition, 2018, AASHTO. According to the publication, the lane shall provide a total deceleration length of 505 feet (inclusive of both deceleration full lane length plus taper). This length is based on speeds of 55MPH, which is slightly above the posted speed limit of 50MPH. Assuming a right-turn lane width of 12 feet, the suggested taper rate is 1:15 or 180 feet. Accordingly, the full lane length shall be 325 feet plus a taper of 180 feet. A plan located in the **Appendix** depicts the conceptual design plan for the right-turn lane.

### **Douglas Drive Sight Distance**

Sight distance requirements were also based on the AASHTO publication noted previously. AASHTO notes the following without any adjustment for grade and speeds for 50MPH.

- For 50MPH and the design vehicle is a truck, the sight distance requirement is 850 feet for a vehicle turning left from the minor street (Douglas Drive).
- For 50MPH and the design vehicle is a truck, the sight distance requirement is 775 feet for a vehicle turning right from the minor street (Douglas Drive).
- Field measurements are based on a height-of-eye of 7.5 feet (a truck) to a height-of-object of 3.5 feet. The measurement is taken from a spot 14.5 feet from the edge of travel way (the white edge line).

Horizons Engineering performed a field survey to measure available sight distance. A plan is located in the **Appendix** and depicts the field measurements. Based on the survey there is acceptable sight distance looking left (891 feet provided with a requirement of 850 feet). For right-turn movements, the required distance is slightly higher than measured (775 feet versus 752 feet). Some tree/brush clearing on the inside of the curve north of the site could be performed to meet the standard.

### **Truck Queue Storage**

To accommodate trucks that may be arriving prior to site opening, an internal truck queuing area is proposed. As noted on the graphic in the **Appendix**, an area that can accommodate up to 24 large trucks is being provided to ensure off-site truck parking is avoided.

## **US 3 and NH 116 Design Review**

An “Auto-Turn” truck turning evaluation was conducted at the US 3 and NH 116 intersection to confirm that current intersection geometric conditions allow for large truck turns from NH 116 to and from US 3. Graphics located in the **Appendix** depict a WB-67 truck navigating the intersection. According to the analysis, large trucks are able to make the right-turn from NH 116 to US 3 southbound and from US 3 northbound to NH 116. No improvements are required for truck turns.

## APPENDIX

## NHDOT Scoping Meeting Notes

## SCOPING MEETING FOR TRAFFIC IMPACTS OF DEVELOPMENT

Date: February 20, 2020

Town/City: Dalton

Location / District: NH 116 / District 1

Consultant / Developer: CMA / Casella

Size & Type of Development: 1,900-acre Solid Waste Facility

Site Access: Proposed on NH 116 via existing driveway on Douglas Dr. in Bethlehem. The general consensus was that the proposed trucking route along US 3 through Whitefield was preferable to other alternatives (such as through downtown Littleton).

Phasing: The applicant is looking to obtain a driveway permit for the complete build-out in one phase, but development within the site will occur incrementally ( $160\pm$  acres at time). NHDOT District 1 noted they may have to reissue the driveway permit in the future if the volume of vehicles exceeds the permitted amount. Within the ten-year forecast period of this traffic study, trucking volumes generated by the proposed site are not expected to increase beyond the existing operations at the NCES Site (Bethlehem).

Study Area: The study will include the site driveway / Douglas Drive at NH 116 in Bethlehem and the intersection of US 3 and NH 116 in Whitefield.

The traffic analysis at the study area intersections should be focused on safely accommodating the proposed trucking traffic and would include turning lane warrants (based on NCHRP methodologies) and truck-turning templates. Although traditional capacity analysis is not necessary at the intersection of Douglas Drive at NH 116, it may be useful in evaluating possible design improvements at the intersection of US 3 and NH 116 in Whitefield.

Analysis Periods: Weekday AM and PM.

Opening Year / Future Year: Assumed to be 2023 / 2033

Additional data: The Dalton site is expected to mirror the existing operations at the NCES Bethlehem waste site. Operating hours of site will be from 6AM-6PM, as per the DES Solid Waste Permit. Trucks are allowed on-site at 6:30AM, but waste is received between 7AM-3PM. Although trucking activity occurs throughout the day, there is an early morning and afternoon peak in trucking volumes. It was noted that the site does not operate on weekends, except after snow days or midweek holidays.

Background growth / other development: Use 1 percent average annual background growth rate. No other background developments were identified.

Site Trip Generation / Distribution / Pass-by: An approximate trip generation of  $40\pm$  trucks per day on an average day and  $90\pm$  trucks/day on a busy (peak summer day) was provided by Casella, based on current operations at the NCES Bethlehem site. Truck transaction data at the existing site will be examined (including the vehicle classification) to provide a detailed estimate of trip generation at the proposed facility during peak summer conditions.

Traffic data at the site driveway for the existing uses (gravel pit, asphalt plant, dragstrip) will need to be collected or estimated.

Casella indicated that they enforce the trucking route to and from the existing NCES facility in Bethlehem and will enforce the proposed trucking route for all long haul trucks utilizing the Dalton facility. It is expected that only some smaller local waste delivery trucks would access and egress the site to and from the west along NH 116 through Littleton.

Design Considerations: NHDOT indicated that the traffic engineer (T.Y.Lin.) should give consideration to the (high) percentage of trucks when examining the need for turn-lanes.

NHDOT District 1 indicated that waste delivery trucks are currently observed parking along or adjacent to the state highway system - presumably waiting for entry into the existing NCES facility in Bethlehem. As such, NHDOT requested that the proposed facility provide adequate internal queueing storage to accommodate trucking demands on site.

Other Issues: The North Country Council (NCC) letter to Nicholas Sanders was distributed at the scoping meeting (attached). NHDOT noted that the development team should follow-up with the town of Whitefield and NCC regarding their concerns on roadway conditions and safety. The development team indicated that they would utilize classification data along the proposed trucking route in combination with their trucking projections to assess their impact. Additionally, the development team plans to reach out to NHDOT Materials and Research (Eric Thibodeau - (603) 271-1750 - [eric.thibodeau@dot.nh.gov](mailto:eric.thibodeau@dot.nh.gov)) to see what pavement condition data along the proposed truck route is available in an effort to address the concerns raised by NCC.

DATE: FEB 06 2020	PROJECT #: 19045
SURVD BY: NWS	DRAWN BY: NWS
CHECKD BY: AJN	ARCHIVE #: H-5604

#### GENERAL NOTES

- THE PURPOSE OF THIS PLAN IS TO REPRESENT THE SIGHT DISTANCE FROM THE ENTRANCE OF DOUGLAS DRIVE AT A HEIGHT OF 7.5 FT TO A HEIGHT OF 3.5 FT AS PER AASHTO STANDARD OF MEASUREMENT AND AT A HEIGHT OF 3' 9" TO THE SAME HEIGHT AS PER NHDOT STANDARD OF MEASUREMENT.
- THIS PLAN IS BASED ON A FIELD SURVEY COMPLETED IN FEBRUARY OF 2020 WITH TOPCON HIPER V DUAL FREQUENCY SURVEY GRADE GNSS RECEIVERS.
- THE HORIZONTAL DATUM IS ON THE NEW HAMPSHIRE STATE PLANE COORDINATE SYSTEM NAD83 (2011). THE VERTICAL DATUM IS THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88). THE ORTHOMETRIC HEIGHT WAS COMPUTED USING GEOD 12B. THE CONTOUR INTERVAL IS 2FT. THE DATUMS WERE DERIVED FROM STATIC GPS OBSERVATIONS TAKEN AT THE TIME OF THE FIELD SURVEY AND PROCESSED USING THE ONLINE POSITIONING USER SYSTEM (OPUS).

DRIVEWAY PERMIT

To: Douglas Ingerson  
Dalton Valley Drag Strip  
104 Douglas Drive  
Bethlehem, NH 03574

City/Town: Bethlehem  
Route/Road: NH 116 (S0000116)  
Patrol Section: 111  
Tax Map: 406  
Lot: 1, 2, 3  
Development: Sand, Gravel, Asphalt & Dragstrip

Permit #: 01-047-4683P  
District: 01  
Permit Date 11/13/2009

Permission is hereby granted to construct (alter) a driveway, entrance, exit or approach adjoining NH 116 (S0000116), pursuant to the location and specifications as described below. Failure to adhere to the standards and engineering drawings previously approved shall render this instrument null and void. Failure to start or complete construction of said facility within one calendar year of the date of this permit shall require application for permit extension or renewal in accordance with the Driveway Access Rules. Facilities constructed in violation of the permit specifications or the rules, shall be corrected immediately upon notification by a Department representative. Any cost by the State to correct deficiencies shall be fully borne by the landowner. The landowner shall defend, indemnify and hold harmless the Department and its duly appointed agents and employees against any action for personal injury and/or property damage sustained by reason of the exercise of this permit.

Drive 1

St Prj: S-2062, 1951 Station: 173+50+Lt.

Location: Approximately 0.16 miles south of West Forest Lake Road on the west side of NH 116 (S0000116).  
GPS: 44.327555 N 71.693859 W.

Specifications: This permit authorizes a paved access to be used as a Drag Strip drive. Any change in use, increase in use or reconstruction of the driveway requires reapplication.

The right-of-way line is located 50 feet from and parallel to the centerline of the highway. The driveway shall not exceed Per Plan in width. The entrance of the drive may be flared; typically the flare radius is one half the driveway width.

Other Conditions:

No structures, including buildings, permanent or portable signs, lights, displays, fences, walls, etc. shall be permitted on, over or under the Highway Right of Way.

No parking, catering or servicing shall be conducted within the Highway Right of Way.

The applicant shall comply with all applicable ordinances and regulations of the municipality or other State Agencies.

The Department has relied on the title and subdivision information provided by the landowner. The Department has not performed additional title research and makes no warranty or representation concerning landowner's legal right to access. In the event of a dispute about the landowner's legal right to the access provided herein, the landowner will defend and indemnify the Department.

It will be necessary for the property owner to extend STOP BAR to the center of the drive and pitch the entrance to the roadside ditch north of the site. All other drainage shall be directed to the southerly catch basin.

A construction bond in the amount of \$50,000.00 shall be required during construction and may be reduced to a \$5,000.00 two year maintenance bond after acceptance of the driveway by NHDOT.

Any future development will require re-application.

The existing drainage shall be maintained.

This permit requires the area adjacent to the highway be graded such that the drive surface will slope

from the edge of pavement according to the plan entitled "JW Chipping Corporation/DBA Chicks Sand & Gravel, Driveway Change of Use to Include Dalton Valley Dragstrip" by Associated Consulting Engineers dated 10/06/2009.

The applicant shall be responsible to mitigate any drainage problems attributed to the alteration of the existing drainage and to obtain easements thereto from downstream landowners.

The Project Engineer is to oversee construction.

This permit supercedes to permit #2940-P dated April 27, 1995.

RE Drive Permit # 01-047-4683P  
Douglas Ingerson – Dalton Valley Drag Strip  
Construction report regarding construction of widening

The drive modification is complete in accordance with the plans submitted with the drive application. Mr. Ingerson and I met Scott Stevenson of the NHDOT Construction Bureau. We reviewed the work we had completed. Mr. Stevenson said the work we had done was satisfactory in regard to matching the work planned on the resurfacing project.

The paving for the widening was done by Blaktop Paving. They took the initiative to insure the work was done in a very professional manner. The traveled way and shoulders were kept very clean and free of all loose hot top. This not only made it better for the traveling public but produced a very flush and tight joint that was well compacted. The crew members did a lot of hand work to make sure there was sufficient hot top mix at the joint for the roller to "pinch" the joint. Their attention to these types of details produced a quality job. Some crew members were Tim Cramer Supervisor, Marty Cameron Foreman, Kevin Brown, Dave Rienhart, Barry Duval, Greg Dube and Todd Leeman. It was a pleasure to work with them. Chick's Sand & Gravel constructed the gravel shoulders to back up the pavement widening and associated slope work. It is my opinion the work is completed in regards to the conditions of driveway permit.

Please see the attached daily reports and photos.

Sincerely

Richard Morneau, PE
