“Doctor Dan Stock 5777 W Northbrook court Ville Indiana to address your comment she's hard to believe or 18 months into this and still having a problem and I would suggest the reason we still have a problem is because we're doing things that are not useful and we're getting our sources of information from Deanna State Board of health and the CDC who actually don't bother to read science before they do this I'm actually a functional family medicine physician that means I am specially trained in immunology and inflammation regulation and everything being recommended by the CDC and the State Board of health is actually contrary to all the rules of science so things you should know about coronavirus and all other respiratory viruses they are spread by aerosol particles which are small enough to go through every mask by the way the literature the supports all of that is in a flash drive that we presented to you has been given to the secretary as a matter of fact it quotes at least three studies such that it's sponsored by the NIH to that exact fact even though the CDC in the NHL chosen to avoid to ignore the very science that they paid to have done that is why you keep struggling with this is because you cannot make these viruses go away the Natural History of all respiratory viruses is that they circulate all year long waiting for the immune system to get sick through the winter or become deranged as has happened recently with these vaccines and then they cause symptomatic disease. Because they cannot be filtered out and they have animal reservoirs and this is very important point no one can make this virus go away. The CDC has managed to convince everybody that we can handle this like we did smallpox where we could make a virus go away small packs had no animal reservoirs the only thing I learned to infect with humans that's why we were able to make that virus go away that will not happen with this anymore than it will with influenza the common cold respiratory syncytia virus adenoviral respiratory syndromes or anything else that has animal reservoirs so the reason you can't do this is because you're trying to do something which has already been tried and can't be done. equally important is that vaccination changes none of this especially with this vaccine. and I would hope this board would start asking itself before it considers taking the advice of the CDC the NIH and the State Board of health. Why we are doing things about this that we didn't do for the common cold influenza or respiratory syncytia virus? And then ask yourself why is a vaccine that is supposedly so effective having a breakout in the middle of the summer when respiratory viral syndromes don't do that and to help you understand that you need to know the condition that is called antibody mediated viral enhancement. That is a condition done when vaccines work wrong as they did in every coronavirus study done in animals on coronaviruses after the SARS outbreak and done in respiratory syncytia virus, where a vaccine used in a vulnerable individual done the wrong way, which why it cannot be done right for respiratory virus, which has a very low pathogenicity rate causes the immune system to actually fight the virus wrong and let the virus become worse than it would with native infection. And that is why you are seeing an outbreak right now and in fact in that flash drive you're going to have coming to you and in the emails with six extra I'll be a study showing at 75% of people who had COVID-19 positive symptom cases in Barnstable, MA outbreak were fully vaccinated. Therefore, there is no reason for treating any person vaccinated any differently than any person unvaccinated you should also know that no vaccine

even the ones I support and would give to myself and my children ever stops infection. In 2014 there was outbreak of mumps in the National Hockey League the only people who came down the symptoms for the people who are unvaccinated or unknown vaccine status boy that sounds like a great argument for vaccines but a question that you should ask yourself knowing that half of the people who came down with symptomatic disease had no contact for the non-vaccinated or unknown vaccine status individual. Where did they get the disease? And the answer was from the vaccinated individuals no vaccine prevents you from getting infection you get infected you shed pathogen this is especially true of viral respiratory pathogens you just don't get symptomatic from it so you cannot stop spread you cannot make these numbers that you've planned on get better by doing any of the things you're doing because that is the nature of viral respiratory pathogens and you can't prevent with a vaccine because they don't do the very thing you're wanting them to do. And you won't be chasing this remainder of your life until you recognize that the Center for Disease Control and the Indiana State Board of Health are giving you very bad scientific guidance and instead read the articles that are gonna come on the email and are on this flash drive and listen to the people in this audience here tonight who actually have recognized the advice they're getting from the CDC and the NIH is counter factual and that's why you're still fighting this with this vaccine that supposedly was gonna make all of this go away but it suddenly managed to make an outbreak of COVID-19 develop in the middle of the summer when vitamin D levels are at their highest. By the way the other thing that we've necessary any vaccine restriction to be considered as if there were no other treatment available. And I can tell you having treated over 15 COVID-19 patients that between active loading with vitamin D, Ivermectin, and zinc, that there is not a single person who has come anywhere near the hospital and we already have studies that show that if you achieve a 25 hydroxy vitamin D level greater than 55 your risk of COVID-19 death will drop down to 1/4 of the population average so the United States. and there are active treatment trials included on that flash drive but this show the same is true. so if you're going to discriminate based upon vaccine you should also discriminate based upon vaccine you should also discriminate based upon 25 hydroxy, vitamin D level zinc taste test response and probably previous infection since there are also studies that flash drive that show that people who have recovered from COVID-19 infection actually get no benefit from vaccination at all no reduction in symptoms the reduction in hospitalization and suffer two to four times the rate of side effects if they are subsequently vaccinated therefore the policies that you are basing on are totally counterfactual I don't blame this board for that 'cause I know you aren't scientists and you thought it was reasonable to listen to the CDC NIH and Indiana State Board of Health but I would encourage that instead you listened to the people out here in this audience and read what's on that data drive and if anybody here in this board has any questions about anything on that I will happily come back and sit with you individually if you would like to explain the science behind this and if you're worried about being sued by somebody because you don't follow the guidance of the CDC and the NIH. I will tell you have a free pro bono expert testimony at your disposal I will testify in defence of this cord turning down all these recommendations for free at any time in any court thank you thank you thank you."
