Earlier, Faster and MORE is Better – Vitamin C

Dr. Mignonne Mary discusses oral and intravenous IV Vitamin C.

The Remedy Room

April 10, 2020

https://www.youtube.com/watch?v=DDt0W3cz3Ds&feature=emb_logo

In this show Dr. Anderson will answer questions he has received in the past few weeks about immunity, COVID, self-care and other related topics. What should I be eating (or not eating)? Is exercise really important? Do supplements help? Why are so many people having such different experiences when they are infected with COVID – what is the difference in a low symptom course of COVID and ending up in the ICU? What is the status of using IV Vitamin C in the US?

“Dr. Enqiang Mao, chief of emergency medicine at Ruijin Hospital, Shanghai, stated that his group treated ~50 moderate to severe cases of COVID-19 infection with high dose intravenous vitamin C.

“The IVC dosing was for 7-10 days, with 10,000 mg for moderate cases and 20,000 mg for more severe cases.

“All patients who received intravenous vitamin C improved, and there was no mortality.

“There were no side effects reported from any of the cases treated with high dose IVC.”

(Richard Cheng, MD, PhD, reporting from Shanghai)

christopher video 1

".....4 days ago I felt like I was staring at inevitable death....."

This is the statement made by Dr Ng's patient, Christopher, who had tested positive for COVID-19. This is one of the worst cases we have seen at CHM. Christopher was sick for nearly 2 weeks, with a high fever, body aches, chills, nausea, and diarrhea. He even took Tylenol and Ibuprofen, with hopes that it would give him some relief from the fever and pain. This only worsened his condition.

Thankfully, Christopher is recovering after 4 days of natural IV therapies and a supplement protocol administered by Dr Ng. This pandemic is real, but so are the results of natural therapies. Watch Christopher's testimonial on he recovered from COVID-19.

Very good coverage on ABC-TV Oklahoma station. <https://ktul.com/.../local-doctors-offer-advice-on-ways-you-c...> "Vitamin C, at least 2,000 to 4,000 milligrams of vitamin C, that's one of our core immune nutrients that we've all known about for a long period of time," Dr. Michele said. "We may have just forgotten about and put it on the shelf. If you can just get one or two, that would be probably C and D in that order, right now because those are going to up-regulate the immune system," Dr. Mark said. "C is more antiviral," Dr. Michelle added. "Vitamin D is directly related to an immune function." Dr. Mark sayst: Vitamin A - 5,000 IU; Vitamin C - 4,000-5,000 mg; Vitamin D - 3,000-10,000 IU.

Dr. Richard Cheng says: "I was made aware that FB Fact Check claims "Shanghai did not officially recommend high-dose IVC for the treatment of Covid-19". Let me make it clear that not only Shanghai, but also Guangzhou, Guangdong Province, another major city in China, announced public endorsement of high-dose IVC for the treatment of Covid-19. Those who do Fact Check, please be more careful.

2. Medicine in Drug Discovery, of Elsevier, a major scientific publishing house, published my article "Early and high-dose IVC n the treatment and prevention of Covid-19."

<https://www.sciencedirect.com/.../arti.../pii/S2590098620300154...>

3. It's great to hear that a New York hospital chain begin to recommend high-dose intravenous vitamin C (IVC) for Covid-19 treatment. But their doses are too small and may not achieve the optimal results that high-dose IVC can offer. Worse, if doses are too small and the IVC treatment doesn't achieve the desired results, it may, again, be interpreted as VC is ineffective. As has happened before."

"Early and sufficiently large doses of intravenous vitamin C are critical. Vitamin C is not only a prototypical antioxidant, but also involved in virus killing and prevention of viral replication.

"The significance of large dose intravenous vitamin C (IVC) is not just at antiviral level. It is acute respiratory distress syndrome (ARDS) that kills most people from coronaviral pandemics (SARS, MERS and now NCP). ARDS is a common final pathway leading to death.

"Dr. Qi Chen of Kansas University Medical Center and I are actively involved in the clinical

"ONE GRAM (1,000 milligrams) OF ORAL VITAMIN C TAKEN THREE TIMES A DAY [3,000 mg/day total] can decrease the risk of employees developing COVID-19." So says Kenneth Walker, MD, in his syndicated column that has been rejected by newspapers across the land. <https://beta.canada.com/.../6c4def69-402f-46f9-ad1b-fead7219.../> And waste no time over the silly Centrum illustration. Centrum Chewables don't even contain the RDA of 90 mg. They only have 60 mg/serving. You need more C than that even if there wasn't a single viral illness anywhere on the planet. Here is another link: <https://www.thesudburystar.com/.../column-could-vitamin-c-hel...> (Dr. Walker uses the pen name Gifford-Jones for his columns.)

PRESTIGIOUS MEDICAL JOURNAL LEGITIMIZES HIGH-DOSE VITAMIN C FOR TREATING COVID-19 PATIENTS. It's only in the paper once, but it IS in there:

Full text at <https://www.thelancet.com/action/showPdf...> Now we can set aside the endless media palaver about just eating foods that contain C. No amount of foods will save the lives of a critically ill COVID patient. "High doses" means supplements and/or intravenous. I say, supplements to prevent; IV for the ICU. The actual reference supporting the statement is not a very positive one. They should have used Dr. Marik's instead. Even so, this is big.

The *Lancet* article “**Treatment for severe acute respiratory distress syndrome from COVID-19**” states:

“Rescue therapy with high-dose vitamin C can also be considered.”

Matthay MA, Aldrich JM, Gott JE.

POSITIVE NORWEGIAN ARTICLE ON VITAMIN C FOR COVID-19: "Allerede på 90-tallet ble det gjennomført flere studier med gode resultater av C-vitamin på forkjølelse- og influensasymptomer. En kohortstudie fra 2017 fant dessuten at C-vitamin også har effekt på alvorlig lungebetennelse. Kanskje ikke så merkelig at Kina har besluttet å sette i gang tre kliniske studier med C-vitamin mot Covid-19. Spørsmålet er hvorfor har ikke flere land hengt seg på!

<https://www.tv-helse.no/vitamin-c-har-effekt-pa-virus-og-l.../>

"Dr Richard Z. Cheng ved China Epidemic Medical Support Team, hevder at tilstrekkelige store doser med intravenøst vitamin er viktig å begynne med tidlig i behandlingen av virus." SE OGSÅ: <https://www.tv-helse.no/vitamin-c-har-effekt-pa-virus-og-l.../>

Positive Norwegian article on Vitamin C for covid-19: " already in the 90 s, several studies were carried out with good results of Vitamin C on cold and cold days. A study from 2017 also found that vitamin c also has an effect on severe pneumonia. Maybe it's not so strange that China has decided to start three clinical studies with Vitamin C against covid-19. The question is why haven't several countries hung up! <https://www.tv-helse.no/vitamin-c-har-effekt-pa-virus-og-lungebetennelse/>

" Dr Richard Z. Cheng at the China epidemic medical support team, claims that sufficient large doses of intravenous vitamin are important to start with early in the treatment of viruses." see also: <https://www.tv-helse.no/vitamin-c-har-effekt-pa-virus-og-lungebetennelse/>

ANOTHER CHINESE GOVERNMENTAL BODY RECOMMENDS VITAMIN C FOR COVID-19. The Health Commission of Guangdong Province says:
"The prevention and treatment of inflammatory storms in the body can be considered using drugs such as blood purification technology, heparin anticoagulation, high-dose vitamin C, large-dose broad-spectrum protease inhibitors, and IL-6 antagonist tocilizumab."
