OPEN DISCUSSION

# Exposure to a "vaccinated" person is a Severe Adverse Event

At least for trial participants.

Warner Mendenhall

### 8.3.5.3. Occupational Exposure

An occupational exposure occurs when a person receives unplanned direct contact with the study intervention, which may or may not lead to the occurrence of an AE. Such persons may include healthcare providers, family members, and other roles that are involved in the trial participant's care.

The investigator must report occupational exposure to Pfizer Safety within 24 hours of the investigator's awareness, regardless of whether there is an associated SAE. The information must be reported using the Vaccines SAE Report Form. Since the information does not pertain to a participant enrolled in the study, the information is not recorded on a CRF; however, a copy of the completed Vaccines SAE Report Form is maintained in the investigator site file.

Pfizer was very concerned about the impact of shedding. SAE=Severe Adverse Event.

If you got the shot how long were you told to isolate from fellow humans?

I suspect no one said a thing.
