Dr. Bryan Ardis discusses prevention treatments and protocol to help you build your immune system! Dr. Ardis brings us so much new information.

You may want to jot this down.

Emergency Broadcast -with guest Dr Ardis

I have outlined the video (time-stamped where he discusses the high points) for quick reference:

**5:20:** The [remdesivir trial for Ebola](#) was stopped because **remdesivir had a higher death rate (53.1%) than the 3 other antiviral drugs in the trial.**

**6:20: Anthony Fauci lied** when he sent out a memo to all hospitals saying Remdesivir was safe and effective and the only drug they could use. In an interview, **Fauci said that [the results of the remdesivir trial were “so promising”](#)**, there was an ethical obligation to use the drug.

**6:33: Dr. Fauci elevated remdesivir as the best drug for COVID while at the same time poisoning all debate about [hydroxychloroquine \(HCQ\)](#).**

*HCQ is cheap (costing under \$10 for the course of a COVID-19 treatment), well-understood by physicians having been prescribed for more than 80 years, and can be taken orally. Yet, Dr. Anthony Fauci and others at [the NIAID](#) preferred remdesivir, a proprietary, intravenous drug manufactured by Gilead Sciences, costing about \$3,500 per treatment, with unknown side effects. And as to not make Big Pharma mad — and possibly threaten invites to cocktail parties, board seats and threaten grant monies — Dr. Fauci and his cohorts did everything possible to promote remdesivir and downplay HCQ, possibly costing millions of lives around the globe. ~[The Washington Post](#)*

**7:00: Gilead** had done a study with Remdesivir for 10 days with 53 patients. **After 10 days 23% of them had acute kidney failure, liver failure, multiple organ failure, and 8% had such severe failure they needed kidney transplants or die. Thats 31% of everyone.**

**8:45:** Yet, this very dangerous drug was set up as the only hospital protocol and was **going to be the cause of most deaths – supposedly “covid deaths” – driving the numbers of COVID deaths through the roof when, in fact, it was remdesevir poisoning.**

**9:20: Remdesivir causes acute kidney failure within 5 days. When a patient has IVs running and can't excrete the fluids as urine because their kidneys are shutting down, their abdomen fills up, then their heart cavity, then their lungs – the hospitals drown our loved ones to death.**

**11:20: Fauci asked the US Government to buy up all the reserves of remdesivir from Gilead, and then asked the Government not to share Remdesivir with any other country until the end of 2020.**

**11:35: At the end of 2020, America had 550,000 dead Americans in hospitals and no other country was even close!**

## **The Hospital Protocol Is What Is Killing Covid Flu Patients**

**13:00: As of November, 2021, now its 725,000 Americans dead, and they are all dying in hospitals and ICUs under a protocol of remdesivir.**

**14:45: Doctors will still tell you you must use remdesivir and that Ivermectin is not safe!**

## **Dr. Bryan Ardis: Vital Treatment Information & and Where to Get Ivermectin:**

**18:00:**

**#1. Say out of the Hospital.**

**#2. Get Ivermectin, HCQ, and budesonide respules (to nebulize)**

**#3. Go to [MyFreeDoctor.com](https://myfreedoctor.com) or [SynergyHealthdpc.com](https://synergyhealthdpc.com) to get a prescription and have a [compounding pharmacy](#) for**

them to write the scrip to. Also [Alldaychemist.com](https://alldaychemist.com).

**My Note:** >>> You can also get these from India via [lifebeltmedicinedropshipper.com](https://lifebeltmedicinedropshipper.com). <<< **(Many I know are using this resources, NO scrip needed)**. Use the blue “Get Instant Quote” request button on the website and text them what you are interested in exactly with dosage and quantity. There will be vendors who will respond to you and give bids. **These meds are made in India, NOT CHINA!!**

[Ivermectin for COVID-19: real-time meta analysis of 64 peer-reviewed studies](#)

[Lawmakers And Their Families Are Secretly Being Treated With Ivermectin](#)

**23:15: Ivermectin Prophylactically 12mg. ONCE per WEEK!**

**23:35: Hydroxychloroquine Prophylactically 300 mg. ONCE per WEEK!**

**For acute care, this study used 12 mg/dx 5 days: Five-day course of ivermectin for the treatment of COVID-19 may reduce the duration of illness**

**#4.** If you can't get HCQ, get **quercetin, 1,000 mg/d** that is not being restricted

**#5.** If you can't get Ivermectin, you can use wormwood herb which is the chemical basis of ivermectin

**25:00: #6. High dose Vitamin C**, minimum of 5,000 mg/d – preferably 10,000 mg/d. No toxic dose of Vit. C. (see [this post](#) for more detail on Vit C)

**#7. Magnesium, 500 mg./d.** (see [this post](#) for links)

**#8. Selenium, 200 mcg/d.**

**#9. Zinc, 100 mg/d.**

**26:30: #10. Apple Pectin Powder, 700mg. 2x/d for 6 months** to break down the toxins in the “vaccine” if you got the shot(s). (I will be writing on this soon.)

**28:50: #11. Vit. D, 5,000 IU/day for life and get 15-20 minutes/d of sunshine.**

**#12. B-Complex vitamins** to repair heart damage from myocarditis, esp methylfolate and methylcobalamine. **You can reverse heart disease.**

**\*\*For the FULL PROTOCOL (including NAC)** to protect from transmission from the “V” and to help those who took the “V”, **go here.**

**30:30: #13. GABA and Ashwaghandha** capsules (right at the end of dinner) both lower cortisol, the stress hormone. Improves relax, sleep, improves metabolism, decreases racing mind.

## **Arm yourself with 2 Documents if you do go to the hospital**

**35:00: #1:** Download 2 pg. Document from the **NIH.gov** website that lists ivermectin as an approved treatment for **COVID.** Show this document to resist remdesivir!

**UPDATE:** As of Dec. 16th, 2021, the document has been changed to show IVM is NOT approved.

**38:30: #2: Hospitals in the US and Canada are being PAID a 20% coded BONUS/essentially BRIBED to make Remdesivir the only treatment for COVID.** ~Dr. Bryan Ardis

Home > Medicare > COVID-19 > New COVID-19 Treatments Add-On Payment (NCTAP)

**COVID-19**

- Enrollment for Administering COVID-19 Vaccine Shots
- Coding for COVID-19 Vaccine Shots
- Medicare COVID-19 Vaccine Shot Payment
- Medicare Billing for COVID-19 Vaccine Shot Administration
- SNF: Enforcement Discretion Relating to Certain Pharmacy Billing
- Beneficiary Incentives for COVID-19 Vaccine Shots
- CMS Quality Reporting for COVID-19 Vaccine Shots
- Monoclonal Antibody COVID-19 Infusion
- New COVID-19 Treatments Add-On Payment (NCTAP)**

### New COVID-19 Treatments Add-On Payment (NCTAP)

CMS issued an [Interim Final Rule with Comment Period](#) that established the New COVID-19 Treatments Add-on Payment (NCTAP) under the Medicare Inpatient Prospective Payment System (IPPS). The NCTAP, designed to mitigate potential financial disincentives for hospitals to provide new COVID-19 treatments, is effective from November 2, 2020, until the end of the COVID-19 public health emergency (PHE).

Through the NCTAP, the Medicare Program will provide an enhanced payment for eligible inpatient cases that use certain new products with current FDA approval or emergency use authorization (EUA) to treat COVID-19, including the following:

- On August 23, 2020, the FDA issued (reissued on November 30, 2020, and revised on March 9, 2021) an [EUA for the use of COVID-19 convalescent plasma](#) for treating COVID-19 in hospitalized patients
- On October 22, 2020, the [FDA approved remdesivir \(Veklury\)](#) for the treatment of COVID-19 for adults and certain pediatric patients requiring hospitalization
- On November 19, 2020, the FDA issued an [EUA for the use of baricitinib \(Olumiant\)](#), in combination with remdesivir (Veklury), for the treatment of suspected or laboratory confirmed COVID-19 in certain hospitalized patients

For eligible cases, the NCTAP is equal to the lesser of these:

- 65% of the operating outlier threshold for the claim
- 65% of the amount by which the costs of the case exceed the standard Diagnosis-Related Group (DRG) payment (including the adjustment to the relative weight under [Section 3710 of the Coronavirus Aid, Relief, and Economic Security Act \(CARES Act\)](#))

**Coding for NCTAP**

NCTAP claims are those that are eligible for the 20% add-on payment under [Section 3710](#) of the CARES Act. Eligible claims have both of the following:

- ICD-10-CM diagnosis code U07.1 (COVID-19)
- ICD-10-PCS codes for remdesivir (Veklury), COVID-19 convalescent plasma, or baricitinib (Olumiant) in combination with remdesivir, as described below

**Codes for Remdesivir or COVID-19 Convalescent Plasma for Hospital Discharges on or after November 2, 2020**

ICD-10-PCS Code	Description
XW033E5	Introduction of remdesivir anti-infective into peripheral vein, percutaneous approach, new technology group 5
XW043E5	Introduction of remdesivir anti-infective into central vein, percutaneous approach, new technology group 5

**42:45: Pregnant Dosage for Ivermectin is the same as for when not pregnant. 12 mg. once a WEEK.**

You can listen to the rest yourself, but I believe what Dr. Ardis is saying has the to potentially to save lives.

Dr. Ardis references “[Ivermectin for COVID-19: real-time meta analysis of 64 peer-reviewed studies](#)”.

And I end here with [this study](#) that shows “**ivermectin possesses antiviral action against SARS-CoV-2 in vitro, WITH A SINGLE DOSE capable of controlling viral replication IN 24-48 HOURS..**”

Figure 8: Risk Accordir

These results, as a whole, demonstrated that ivermectin possesses antiviral action against SARS-CoV-2 in vitro, with a single dose capable of controlling viral replication in 24-48 hours, and the possibility of repeating it periodically.

Research has been added on other forms of action of IVM in the face of COVID disease, not directly on the causative agent, but on the pathophysiological mechanisms through which its deleterious activity develops (hyperinflammation and hypercoagulability).

All of the above is summarized in Figure 9 [9-12].

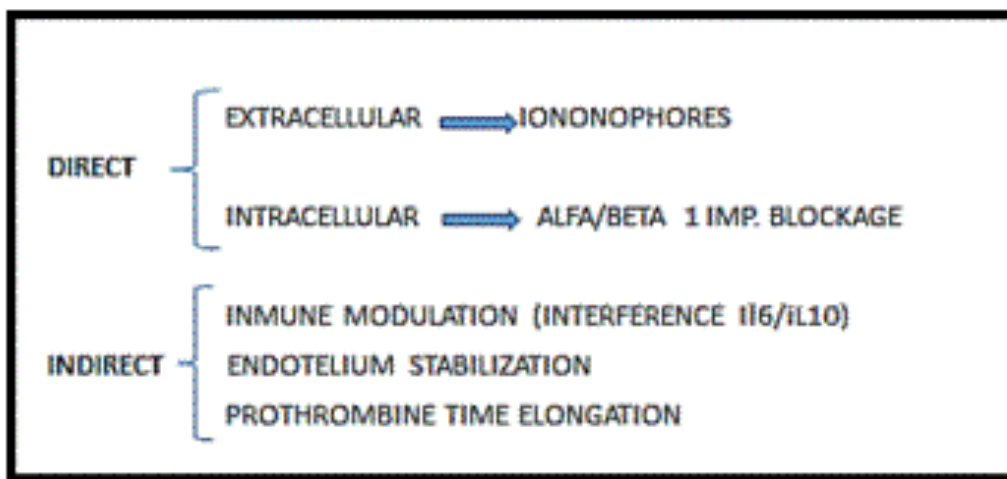

Figure 9: Ivm Mechanisms of Action Against Covid.

**(Source)** “Ivermectin possesses antiviral action against SARS-CoV-2 in vitro with a single dose within 24-48 hours”.

**\*\*For the FULL PROTOCOL (including NAC)** to protect from transmission from the “V” and to help those who took the “V”, **go here.**

**“Why did they select a drug that was proven to be the most deadly (from an ebola trial) and then lie to you about it? There is no other reason than to attempt to depopulate and sterilize a whole lot of people... They are making billions on this... greed, money, and there is definitely a narcissism behind it.” ~Dr. Bryan Ardis**
