SV40 Virus Linked to Multiple Cancers Found in mRNA Vaccines, Microbiologist Says

Microbiologist Kevin McKernan, a former researcher for the Massachusetts Institute of Technology Human Genome Project, said he discovered simian virus 40 (SV40), a virus found in monkey and humans, in mRNA COVID-19 vaccines. SV40 has been linked to cancer in humans, including mesotheliomas, lymphomas and cancers of the brain and bone.

By **Dr. Joseph Mercola**

Story at a glance:

- Microbiologist Kevin McKernan — a former researcher and team leader for the Massachusetts Institute of Technology (MIT) Human Genome Project — has discovered massive DNA contamination

in the mRNA COVID-19 shots, including simian virus 40 (SV40) promoters.

- SV40 has been linked to cancer in humans, including mesotheliomas, lymphomas and cancers of the brain and bone. In 2002, the Lancet published evidence linking polio vaccines contaminated with SV40 to Non-Hodgkin's lymphoma. According to the authors, the vaccine may be responsible for up to 50% of the 55,000 Non-Hodgkin's lymphoma cases diagnosed each year.
- The level of contamination varies depending on the platform used to measure it, but no matter which method is used, the level of DNA contamination is significantly higher than the regulatory limits in both Europe and the U.S. The highest level of DNA contamination found was 30%.
- The finding of DNA means the mRNA COVID-19 shots may have the ability to alter the human genome.
- Even if genetic modification does not occur, the fact that you're getting foreign DNA into your cells poses a risk in and of itself. Partial expression could occur or it might interfere with other transcription translations that are already in the cell. Cytoplasmic transfection can also allow for genetic manipulation, as the nucleus disassembles and exchanges cellular components with the cytosol during cell division.

In the video below, Dr. Steven E. Greer interviews microbiologist Kevin McKernan — a former researcher and team leader for the MIT Human Genome Project — and Dr. Sucharit Bhakdi about the [DNA contamination](#) McKernan's team has found in the [Pfizer](#) and Moderna mRNA shots.

As it turns out, spike protein and the [mRNA](#) are not the only hazards of these injections.

McKernan's team has also discovered [SV40](#) promoters that, for decades, have been suspected of causing cancer in humans, including mesotheliomas, lymphomas and cancers of the brain and bone.

The findings were posted on [OSF Preprints](#) in early April.

Sequencing of bivalent Moderna and Pfizer mRNA vaccines reveals nanogram to microgram quantities of expression vector dsDNA per dose

"The assembly of Pfizer vial 1 contains a 72bp insertion not present in the assembly of Pfizer vial 2. This indel is known for its enhancement to... pic.twitter.com/b5k44Dpc4d

— KanekoaTheGreat (@KanekoaTheGreat) [May 20, 2023](#)

As explained in the [abstract](#):

"Several methods were deployed to assess the nucleic acid composition of four expired vials of the Moderna and Pfizer bivalent mRNA vaccines. Two vials from each vendor were evaluated. ...

"Multiple assays support DNA contamination that exceeds the European Medicines Agency (EMA) 330ng/mg requirement and the FDAs 10ng/dose requirements."

As noted by Greer, this means that governments and drug companies "have misled the world to a far greater extent than previously known."

If these findings are correct, it would also mean that "the so-called 'vaccines' are actually altering the human genome and causing permanent production of the deadly spike protein," and this internal production of spike protein would, in turn, "trigger the immune system to attack its own cells," Greer says.

In the interview, McKernan explains how the DNA contaminants found in the [COVID-19](#) jabs can result in the genetic modification of the human genome, and Bhakti reviews how and why the shots can trigger autoimmune diseases.

Why the COVID “mRNA” vaccines are actually DNA gene therapies that must b

Background: What is SV40?

In 2002, the Lancet published evidence linking polio vaccines contaminated with [SV40 to Non-Hodgkin's lymphoma](#). According to the authors, the vaccine may be responsible for up to half the 55,000 Non-Hodgkin's lymphoma cases diagnosed each year.

How did this simian (monkey) virus get into the human population?

According to the late [Dr. Maurice Hilleman](#), a leading vaccine developer, Merck inadvertently unleashed the virus via their polio vaccine.

It's unclear exactly when SV40 was eliminated from the polio vaccine. The timing also varies from country to country. For example, [SV40-contaminated polio vaccines](#) were administered in Italy as recently as 1999.

As reported in a [Lancet book review](#) of “The Virus and the Vaccine: The True Story of a Cancer-Causing Money Virus, Contaminated Polio Vaccine and the Millions of Americans Exposed”:

“By 1960, scientists and vaccine manufacturers knew that monkey kidneys were sewers of simian viruses. Such contamination often spoiled cultures, including those of an NIH [National Institutes of Health] researcher named Bernice Eddy, who worked on vaccine safety ... her discovery ... threatened one of the USA's most important public-health programs. ...

“Eddy tried to get word out to colleagues but was muzzled and stripped of her vaccine regulatory duties and her laboratory ... [Two] Merck researchers, Ben Sweet and Maurice Hilleman, soon identified the rhesus virus later named SV40 — the carcinogenic agent that had eluded Eddy.

“In 1963, U.S. authorities decided to switch to African green monkeys, which are not natural hosts of SV40, to produce polio vaccine. In the mid-1970s, after limited epidemiological studies,

authorities concluded that although SV40 caused cancer in hamsters, it didn't seem to do so in people.

"Fast forward to the 1990s: Michele Carbone, then at NIH, was working on how SV40 induces cancers in animals. One of these was mesothelioma, a rare cancer of the pleura thought in people to be caused mainly by asbestos. The orthodoxy held that SV40 didn't cause human cancers.

"Emboldened by a 1992 NEJM paper that found DNA 'footprints' of SV40 in childhood brain tumors, Carbone tested human mesothelioma tumor biopsies at the National Cancer Institute: 60% contained SV40 DNA. In most, the monkey virus was active and producing proteins.

"He published his results in *Oncogene* in May, 1994, but the NIH declined to publicize them ... Carbone ... moved to Loyola University. There he discovered how SV40 disables tumor suppressor genes in human mesothelioma, and published his results in *Nature Medicine* in July, 1997. Studies in Italy, Germany, and the USA also showed associations between SV40 and human cancers."

mRNA COVID jabs contaminated with double-stranded DNA

With that background, let's get back to McKernan's findings, which in addition to the featured video are also discussed in Daniel Horowitz's podcast below.

In short, his team discovered elevated levels of double-stranded DNA plasmids, including SV40 promoters (DNA sequence that is essential for gene expression) that are known to trigger cancer development when encountering an oncogene (a gene that has the potential to cause cancer).

The level of contamination varies depending on the platform used to measure it, but no matter which method is used, the level of DNA contamination is significantly higher than the regulatory limits in both Europe and the U.S., McKernan says. The highest level of DNA contamination found was 30%, which is rather astounding.

As explained by McKernan, when using a typical PCR test, you'll be considered positive if the test detects the SARS-CoV-2 virus using a cycle threshold (CT) of about 40. In comparison, DNA contamination is detected at CTs below 20.

That means the contamination is a million-fold greater than the amount of virus you'd need to have in order to test positive for COVID-19.

"So, there's an enormous difference here with regards to the amount of material that's in there," McKernan says.

In his May 20 [Substack article](#), he also points out that people who argue that double-stranded DNA and viral RNA are a false equivalency because viral RNA is replication-competent, are wrong.

"The majority of the sgRNA you are detecting in a nasal swab in your nose is NOT REPLICATION COMPETENT as shown in [Jaafar et al](#). It is just an RNA fragment that should have lower longevity in your cells than dsDNA contaminating fragments," he writes.

In that Substack article, McKernan has also copied a 2009 study discussing how [DNA in vaccines](#) can cause cancer and highlighted the most relevant parts. It's a helpful resource if you want to learn more.

Quality control is sorely lacking

As for how SV40 promoters ended up in the mRNA shots, it appears to be related to poor quality control during the manufacturing process, although it's unclear where in the development SV40 might have sneaked in.

Quality control deficiencies may also be responsible for the high rate of anaphylactic reactions we've been seeing.

McKernan tells Greer:

"It's in both Moderna and Pfizer. We looked at the bivalent vaccines for both Moderna and Pfizer and only the monovalent vaccines for Pfizer because we didn't have access to monovalent vaccines for Moderna. In all three cases, the vaccines contain double-stranded DNA contamination.

"If you sequence that DNA, you'll find that it matches what looks to be an expression vector that's used to make the RNA ... Whenever we see DNA contamination, like from plasmids, ending up in any injectable, the first thing people think about is whether there's any E. coli endotoxin present because that creates anaphylaxis for the injected.

"And, of course ... there's a lot of anaphylaxis going on, not only on TV but in the VAERS database. You can see people get injected with this and drop. That could be the background from this E. coli process of manufacturing the DNA."

Regulatory agencies knew there was a contamination problem

In his Substack article, McKernan points out that Pfizer itself submitted evidence to the European Medicines Agency (EMA) showing sampled lots contained vast differences in the levels of double-stranded DNA contamination.

The arbitrary limit for dsDNA that the EMA came up with was 330 nanograms per milligram (ng/mg). Data submitted to the EMA by Pfizer shows sampled lots had anywhere from 1 ng/mg to 815 ng/mg of DNA.

McKernan adds:

"This limit likely did not consider the potency of this dsDNA contamination if it was packaged in an LNP [lipid nanoparticle]. Packaged dsDNA is more potent as a gene therapy. We now know this DNA is packaged and transfection ready. Even lower limits should be applied if the DNA is packaged in [transfection ready LNPs](#). ...

"Even with Pfizer being able to cherry pick the data they provided to the EMA for 10 lots, they see a 1 to 815ng/mg variance. If you were to expand this study to 100 or 1000 lots, you'd likely see another order or two of magnitude variance."

Double-stranded DNA may integrate into your genome

The presence of double-stranded DNA also brings up another major concern, and that is the possibility of genomic integration.

McKernan states:

“At least on the Pfizer side of things, it has what’s known as an SV40 promoter. This is an oncogenic virus piece. It’s not the entire virus. However, the small piece is known to drive very aggressive gene expression.”

“And the concern that people, even at the FDA, have noted in the past whenever injecting double-stranded DNA, is that these things can integrate into the genome,” McKernan says.

While [McKernan’s paper](#) does not present evidence of genome integration, it does point out that it’s possible, especially in the presence of SV40 promoters:

“There has been a healthy debate about the capacity for SARs-CoV-2 to integrate into the human genome ... This work has inspired questions regarding the capacity for the mRNA vaccines to also genome integrate. Such an event would require LINE-1 driven reverse transcription of the mRNA into DNA as described by Alden et al.

“dsDNA [double-stranded DNA] contamination of sequence encoding the spike protein wouldn’t require LINE-1 for Reverse Transcription and the presence of an SV40 nuclear localization signal in Pfizer’s vaccine vector would further increase the odds of integration.”

Manifold risks

That said, even if genetic modification does not occur, the fact that you’re getting foreign DNA into your cells poses a risk in and of itself, McKernan says.

For example, partial expression could occur, or it might interfere with other transcription translations that are already in the cell.

Bhakti also points out that the SV40 promoters do not need to be present in the nucleus of the cell for problems to occur.

Cytoplasmic transfection can, in and of itself, allow for genetic manipulation, because the nucleus disassembles and exchanges cellular components with the cytosol during cell division.

In addition to having DNA floating around and causing potential problems, the RNA in the COVID-19 jab is also modified to resist breakdown.

“So, we have TWO versions of the spike protein floating around that can persist longer than anticipated,” McKernan says, and the spike protein, of course, is the most toxic part of the virus that can cause your body to attack itself.

Both McKernan and Bhakti are adamant that ALL mRNA “vaccines” must be immediately stopped, whether for human or animal use, due to the magnitude of the risks involved.

‘Alarming problems’

In the video below, Yusuke Murakami, a professor at Tokyo University, expresses alarm over the finding of SV40 promoters in the COVID-19 jabs. The interview is in Japanese but has English subtitles.

I've included it because I think he does a good job of putting the problem into layman's terms:

Murakami says:

"The Pfizer vaccine has a staggering problems. This figure is an enlarged view of Pfizer's vaccine sequence. As you can see, the Pfizer vaccine sequence contains part of the SV40 sequence here. This sequence is known as a promoter.

"Roughly speaking, the promoter causes increased expression of the gene. The problem is that the sequence is present in a well-known carcinogenic virus. The question is why such a sequence that is derived from a cancer virus is present in Pfizer's vaccine.

"There should be absolutely no need for such a carcinogenic virus sequence in the vaccine. This sequence is totally unnecessary for producing the mRNA vaccine. It is a problem that such a

Resources for those injured by the COVID jab

The more we learn about the COVID-19 jabs, the worse they appear. While they suck as vaccines, they're truly masterful bioweapons, as they're capable of destroying health in any number of ways, through myriad mechanisms.

If you got one or more jabs and are now reconsidering, first and foremost, never ever take another [COVID-19 booster](#), another mRNA gene therapy shot or a regular vaccine.

You need to end the assault on your body. Even if you haven't experienced any obvious side effects, your health may still be impacted long-term, so don't take any more shots.

If you're suffering from side effects, your first order of business is to eliminate the spike protein that your body is producing. Two remedies that can do this are hydroxychloroquine and [ivermectin](#). Both of these drugs bind and facilitate the removal of spike protein.

The Front Line COVID-19 Critical Care Alliance (FLCCC) has developed a post-vaccine treatment protocol called [I-RECOVER](#). Since the protocol is continuously updated as more data become available, your best bet is to download the latest version straight from the [FLCCC website](#).

For additional suggestions, check out the [World Health Council's](#) spike protein [detox guide](#), which focuses on natural substances like herbs, supplements and teas.

To combat the neurotoxic effects of spike protein, a March 2022 review paper suggests using [luteolin and quercetin](#).

[Time-restricted eating](#) and/or sauna therapy can also help eliminate toxic proteins by stimulating autophagy.

I pray for those who are vaccine injured and for those of us who are unvaxxed to avoid food tainted with MRNA. I see people boasting they are pure bloods but this is no time to boast or alienate people who believed differently. Those of us who are healthy have a duty to help those who are suffering any way we can. People need to stop falling for the divide and conquer strategies MSM and the government are trying to use against us.

I don't know. But I suggest if you think something is important enough, you print out articles and studies because more and more information is censored and scrubbed from the Internet. People do need to be held accountable and 2024 will be a wild election year because many of us will not accept

Even more concerning are the deep fake photos and videos that will try to steer you toward one candidate and away from another. These are so good now that the average viewer will be easily fooled. The ones on the horizon will fool the experts. We will not be able to trust anything we see or hear unless it is face-to-face.

...Both McKernan and Bhakdi are adamant that ALL mRNA "vaccines" must be immediately stopped, whether for human or animal use, due to the magnitude of the risks involved.

*

Most moderately-informed men and women on this issue would fully concur with Kevin McKernan, Sucharit Bhakdi and a growing, rapidly-increasing number of doctors and medical experts across the Earth: "Ban all mRNA injections worldwide - immediately!"

This Simian virus was in the polio vaccines given children years ago...and how many other vile substances were in the defective products sold by the vaccine industry? After I read Vaccination is NOT Immunization by Dr. Tim O'Shea...as a parent who trusted my children's pediatrician in the past - it made me sick. This book listed all the items put together by mad scientists injected directly into children's bloodstreams. This would not create immunity...it would damage and break down the immune system...poison kills!

When assessing the validity of Mercola's virus articles it's imperative to consider the insurmountable basic problems he has with virology. How were viruses supposedly 'isolated' in Bernice Eddy's and Carbone's day? The same as in the 1950's and now; The Viral Toxic Soup and 'Implied' Method i.e. The observed Cytopathic effect on cells in a multi-toxic soup are ASSUMED TO BE ONLY DUE TO THE PRESENCE OF A HYPOTHESISED VIRUS. No other toxins in the soup are considered by virologists as Cytopathic though individually these other toxins too are KNOWN to cause Cytopathy in cells. The studies/papers/guesses quoted By Mercola are replete with such accurate terminology as "Matches what LOOKS TO BE"- "Didn't SEEM to do so."- "Associations."- "Gene that has the POTENTIAL to cause." - "That COULD BE." - "This limit LIKELY did not consider." Of course they use the ever Perennial word - "MAY" which carries its deliberately hidden and unspoken opposite "MAY NOT." Cancer Research bodies gave up on the 'Cancer Virus' dead end decades ago. Resurrection and recycling of worn out theories are so tempting when more funding is at stake.
