

Dekton® is a refined blend of natural quartz, glass and porcelain. The raw materials are fused together and compressed under high pressure to create a slab that is very dense and compact. This high tech process simulates the natural metamorphic change that natural stone undergoes when subjected to high temperatures and pressure over thousands of years.

Dekton® is a great option for those looking to turn their kitchens, bathrooms and outdoor cooking areas into a unique, practical space. Truly, the possibilities are endless!

## Strength and Durability

- Dekton® has over 5 times the flexural strength of granite; it can be installed in thinner material over greater spans allowing for up to a 12" unsupported overhang.
- Dekton® is highly resistant to ultraviolet light and will not fade or degrade over time.

## No Maintenance

- Dekton® requires no maintenance; it is the most scratch resistant product on the market and more resistant to abrasion than natural stone and quartz.
- Its nonporous surface never needs to be sealed.

## Stain Resistant & Hygienic

- Dekton® is completely stain proof; even the most stubborn stains like coffee, wine and rust can easily be removed with warm water and soap.
- Dekton® is approved by the National Sanitation Foundation (NSF) because it **DOES NOT** absorb moisture; bacteria, mildew and mold **CANNOT** grow on the surface if not properly sealed.

## Heat Resistant

- Dekton® has an extremely high resistance to heat and cold; a hot pan **CAN** be placed directly on its surface: it **WON'T** thermoshock in high-risk areas such as fireplaces.
- Its natural resistance to ice and thawing make it the perfect material choice for an outdoor grill countertop/wall cladding in the Midwest.
