OUR SERVICES

CONSULTATION

All our services start with a thorough consultation to assess your chronic pain problem and formulate a plan of care.

The consultation is part of the OHIP services, and most consults are seen within two weeks.

MINIMALLY INVASIVE TREATMENT

Our featured services include Fluoroscopy (X-ray) or ultrasound guided procedures for cervical, thoracic, or lumbar spine, as well as injections for selected nerves and joints. Some of the procedures include:

- Epidural Steroid Injections
- Radiofrequency Thermocoagulation/ Rhizolysis
- Selective Nerve Root Blocks
- Hip / Shoulder / Knee Injections
- Sympathetic Blockade
- Dorsal Root Ganglion blockade
- Viscosupplementation
- Neurotoxin Blockade for Pain Control
- Regenerative treatment alternatives.

WHO WE ARE

The Interventional pain specialists [TIPS] is an out-of-hospital [OHP] clinical facility with advanced methods for treatment of chronic spinal, musculoskeletal, and sports-related pain.

Our doctors are specialists each with years of experience in their selected fields and with subspecialty training for advanced procedures.

Our doctors perform image-guided procedures that allow them to see real-time images of each patient and allow them to tailor the treatment of their pain.

HOW WE HELP

Chronic spinal pain, sports related injuries, musculoskeletal or neurological pain usually improves with a trial of conservative care including, enough time to heal, medications, physiotherapy or alternative healing.

If chronic pain has surpassed the expected progress, our services may potentially be the next step in your treatment.

We can help bridge the gap when surgery is not needed, and conservative care is not sufficient to restore quality of life.

Contact your family physician, primary care provider, or specialist for a referral. Call us if you have any questions (905) 237-4623 or visit tipsmed.com
