

## It pays to be prepared.

Over 90% of homes destroyed in bushfires are the result of ember attacks

### What is a Rainmaker?

The Rainmaker Bushfire Sprinkler is a portable, easy to use external water spray system. Designed to defend buildings and the surrounding area from ember and direct flame attack.

### Who should purchase the Rainmaker?

Anyone living in a bushfire prone area, the Rainmaker will increase the resilience of any building structure; there is a mounting system to suit all applications

### Why should I purchase a Rainmaker?

The CSIRO states that over 90% of homes destroyed in bushfires are the result of ember attacks, these losses could have been prevented by installing an external water spray system.

FPA Australia says that a bushfire sprinkler system or an external water spray system can be a major factor in protecting homes built in bushfire prone areas.

The Rural Fire Service has stated "When we have major fires in NSW, there will not be a fire truck at everybody's door every time they need them." This means YOU need to ensure your home is fire-resilient.

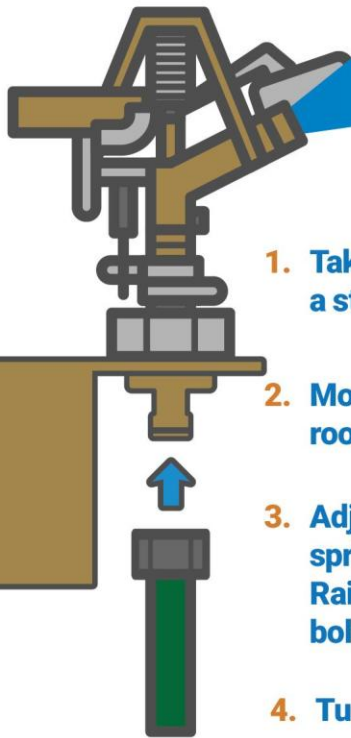

The Rainmaker creates drenched asset protection zone around your home, reducing the flammability of material in the area and the heat of the air, slowing the advance of a fire. Our engineer's have consulted the latest data available to create a system that can use a variety of water sources to produce the effect of a rain storm.

- Water can be supplied to the system using a pump or mains water.
- The system is a cost effective, reliable and easily deployed when compared with other sprinkler systems.
- The Rainmaker System is Australian made.
- All the components are industrial quality and built to last.
- The system is user friendly and controlled from the ground; you don't have to risk your safety by clambering onto the roof.
- The Rainmaker can be mounted on the gutters, a star post, our bracket, or simply hung on a fence

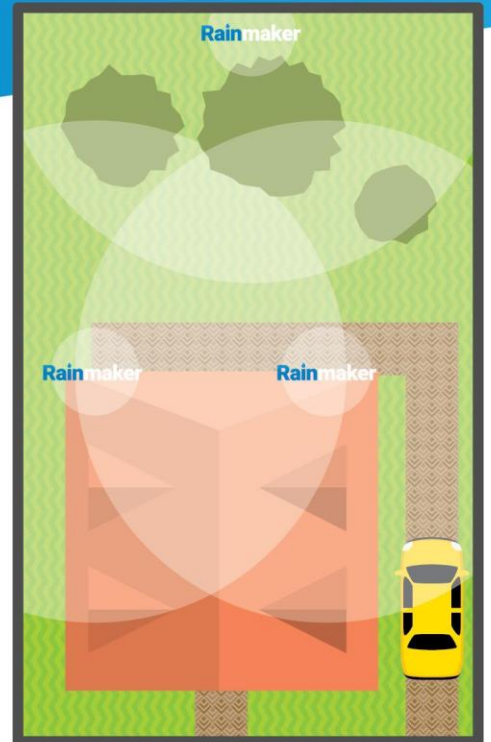

Our systems will reduce the theoretical Bushfire Attack Level of your home, increasing the prospect of your home surviving a direct flame or ember attack.

# How to set up the Rainmaker™

1. Take the Rainmaker and attach a standard garden hose.
2. Mount the Rainmaker on the roof gutter facing the fire.
3. Adjust the spray area of the sprinkler and the angle of the Rainmaker using the locking bolts.
4. Turn on the water.

Three Rainmakers can protect a single house

## Contact us with any enquiries, we are more than happy to help.

Installing Rainmaker's to wet down your home and garden has the effect of increasing your homes bushfire resilience, why stand outside with a hose when the rainmaker will do the work.

The recommended set-up for the Rainmaker uses separate, individually controlled hoses to feed each sprinkler. Allowing for adjustments to individual Rainmakers as required.

### Disclaimer

No sprinkler system or like device can protect buildings or the occupants of buildings from wildfire. If properly installed and operated in accordance with the applicable instructions, "Rainmaker" products will reduce the risks posed by ember and direct flame attack. "Rainmaker" products will not protect buildings or the occupants of buildings from the radiant heat of a wildfire. To the extent permissible by law, purchasers of "Rainmaker" products operate "Rainmaker" at their own risk and release and indemnify the manufacturers and suppliers of "Rainmaker" products and their directors, officers, servants, agents, employees and assigns from and against all actual, direct, indirect or alleged claims, damages, demands, losses, costs, liabilities, suits, actions, expenses or proceedings of whatsoever nature, whether arising under any statute or at common law, arising out of or in connection with injury to (which shall include illness) or death of any person or damage to or destruction of any real or personal property caused directly or indirectly by or in connection with the manufacture, supply, installation, operation or performance of "Rainmaker" products.
