Energy Efficiency

Boiler Aid gives you real-time boiler data you need to make informed decisions, key optimizations and gives you the ability to remotely configure your boiler.

Extend your boilers life

Remote monitoring equipment enables optimization of older boiler systems, early failure detection and can be used to extend boiler life by 7 to 10 years. Delaying boiler replacement can lead to major capital investment savings.

Failure Notification

Change your failure response strategy by getting notified, getting to the site and repairing the problem before anyone knows.
