Tri-Sport For Free-Wheeling Three-Wheeling

It's here. The great American three wheel revolution. The newest goingest, fastest growingest great way to move. Three-wheeling, free-wheeling fun for the whole family. Young and old, boys and girls. Everybody.

Whole new worlds open to three-wheelers

When you're a three-wheeler, you jump on and go. Where ever you point your nose. Scaling hills and probing valleys. Scooting over dunes and through woods. Zipping across wide open spaces. Seeing the land around you with a completely new, fresh, exciting

perspective. Feeling solid earth beneath your wheels suddenly become a little squishy as you drive through a sandy spread. And *then* become bumpy and grumpy as you course across a rocky berm. Sensing like never before the warms and cools of bright sunny meadows and shady woodlands. And in winter, cleaving through downy snow with a ski up front. An experience you just won't want to miss. That's what three-wheeling's all about. There's just nothing else like it. And . . .

Safe and sure riding pleasure

Ground hugging three point design makes for safer riding. You sit low to the ground, comfortably nestled in a plush bucket seat. Dual rear wheel brakes put you in complete control at all times. Tri-Sport's extra wide stance makes it the most able and stable three-wheeler going.

Ruggedly durable and dependable

No matter where you take it, Tri-Sport's five great models can take it. Sturdy welded steel frame, impact resistant fiberglass reinforced acrylic body, time tested smooth performing engines and torque converters and big jouncy low pressure tires assure dependable, trouble free operation for a long time to come. And Tri-Sports are fully warranted too, should some adjustments be necessary. So get up and go, get out and play the great new way. Tri-Sport.

It's easy.

Tri-Sports are so simple to operate, even the most modest beginner can be an expert in no time at all. No gears, no shifting. Pull the starter cord and you're under way, right away. As fast or slow as you like, by simply twisting the throttle. Stop with a squeeze of the hand brake. Touch a button and the engine shuts down.

The great new way
to get out and play
