We're focused on providing our customers with the best possible instrumentation – a goal that we've pursued since 1920. We continue to work to deliver the functionality, durability, and high quality finish that have earned our products a best-in-class reputation, worldwide. At the same time, we strive to continually pursue innovations that make our instrumentation more efficient, affordable, and useful to the people who own and operate vehicles and equipment that feature our products.

While we're aware of the vital role of our instruments as a human-machine interface and the importance of factors such as ergonomics, cost, and reliability, we haven't neglected aesthetics.

From rugged analogue gauges to sophisticated, flexible CAN bus platforms, we're working to give our customers choice, flexibility, and style for all their monitoring needs.

SingleViu

The all new SingleViu range builds on the reliability that VDO has been known for while adding advanced modern functionality. Featuring RGB LED illumination, stepper motor operation with 240deg dial sweep, built in warning light and IP67 rating. SingleViu gauges will accept both analogue and J1939 signals, ensuring compatibility in more applications than ever before! Available in 52mm, 80mm & 100mm. For more information on customisation, please contact your authorised VDO service agent.

COCKPIT VISION

THRU DIAL ILLUMINATION

Cockpit Vision is the pinnacle of instrument technology. It represents latest advances in instrument illumination and installation techniques. Using fibre-optic technology to illuminate the pointer and VDO's Trioptic through dial lighting we achieve superb night time illumination.

SPEEDOMETER

Illumination through dial and pointer.

Field adjustable to suit 500 to 400,000 imp/km by pulse setting, or auto-calibration function through LCD readout via reset button.

Compatible with hall effect, inductive or blocking oscillator senders.

Illumination 12V included. For 24V application, use globe 240.053 (2 required)

TACHOMETER

Suitable for most petrol and diesel engines. Field programmable to suit 4, 6 or 8 cyl./4 stroke ignition and alternator pick-up (terminal "W"). Single phase, not suitable for star point or magneto system. For standard points ignition system, add a 1N4004 diode in series with the signal wire (cathode towards tacho). Illumination 12V included.

TACHOURMETER

Suitable for most petrol and diesel engines. Adjustable through LCD and reset button. Field programmable to suit 1-12 cyl. 4-stroke or 1-4 cyl. 2-stroke engines. ignition and alternator pick-up ("W" terminal). Also suitable for signal from generator or inductive sender unit but not suitable for magneto ignition system. Incorporated hourmeter shows true engine hours. Operating hours 99,999.9. Pulse range 0.5-200 pulses per rev. Illumination 12V included. For 24V application use globe 240.053 (2 required).

GAUGE WARNING LIGHT INTERFACE

Designed to be used in conjunction with VDO electric temp or pressure gauges with senders, or can be used using VDO senders only (extra resistor 1K, 1W required).

Ideal for switching warning lamps, buzzers, external relays, thermofan and other devices.

Features 5 amp N/O or N/C Relay contact output.

Adjustable Electronic Switch Boxes		12/24V
Part No.	Description	Specification
410.060	Suitable for 1 warning function 1 input - 1 output	2000-10 ohms input 5 amp relay output
410.061	Suitable for 3 separate warning functions	2000-10 ohms input Transistor Output 3 input - 3 output

GAUGE OHMS CONVERSION BOX

The 410.063 has been designed to correct the problem that occurs when an original vehicle sender is not available to match a particular gauge and vice versa. Another example is where the level sender in an LPG tank can be used to accurately drive the original (petrol) fuel gauge in a vehicle. Or the unit could be automatically switched to read between petrol and gas.

It can also 'copy' the signal from an existing gauge/sender combination so that the fuel level may also be observed at a different location. In this case, one sender can be used to drive three or four matching gauges. Because the unit is effectively a 'resistance converter' it can also be used on temperature or pressure gauges to correct where the original sender is no longer available for a gauge. A further advantage is the 8 point conversion curve built in to the unit. This allows it to be used where the resistance graph is a curve, as in large and irregular shaped fuel tanks on trucks and off-road vehicles.

Suitable for 12/24V applications.

ELECTRONIC RATIO BOX

The VDO Electronic Ratio Box is designed to divide or multiply an input frequency by a fixed ratio. The input signal could be a speedometer or tachometer signal from a magnetic pickup, alternator pickup or Hall effect sender. Typical applications include correcting the speedometer on a vehicle which has had the diff ratio changed, or calibrating a tachometer which has no calibration adjustment.

Suitable for 12/24V applications.

Switch Box 411.105

SIGNAL AMPLIFIER/DIVIDER

The VDO Signal Amplifier/Divider is a general purpose module designed to work with most speedometer and tachometer signals. This box will amplify a low voltage signal to a 10V peak to peak square wave. This can be useful when a signal is too low to drive a speedometer, tacho, cruise control or any other such device or to utilise a two wire inductive sender where a hall effect signal is required. The output signal may also be divided in frequency by a factor of 1, 2, 4, 8, or 16 to allow easier integration to another instrument.

MULTI-FREQUENCY SWITCH BOX

The VDO Speed & RPM switch has been designed to work with all standard ignition systems, and will provide a negative output once a predetermined Speed/RPM has been reached. In standard format the signal will turn off once the input signal falls below the pre-set point.

LOW COOLANT ALARM

The Low Coolant Alarm monitors current continuity while the low water level probe is submerged in water. The location of the probe in the radiator or header tank determines the critical water level. Warning occurs within a few seconds of this level being reached. The warning light and buzzer can only be cancelled by switching off the engine and includes a delay to avoid premature triggering.

NOT SURE?

VDO Gauge Check can be found on page 52. Handy workshop tool used to test gauges and measure variable resistance required for replacement senders. Simply connect to the sender terminals and use the dial to simulate gauge movement. Resistance can then be recorded to help match with the correct replacement sender.

PRESSURE SWITCHES

VDO Pressure Switches are robust, compact and designed to operate in harsh environments at various pressures and in extended duty applications.

Because of its special internal design, this switch can tolerate high pressure spikes inherent in many pressure systems. The switch is factory calibrated but in the case that adjustment is needed in the field, the switch offers an adjustment screw to facilitate any fine tuning required within the given set point range. The standard polyimide diaphragm (Kapton), makes it compatible with many gases, oils, jet fuels and similar hydrocarbons media. Standard screw type electrical terminals are available. Also included with the switch are screw to blade converters.

The overall ruggedness of the VDO Pressure Switch makes it a popular choice for many OEM and aftermarket

REED SWITCH LEVEL SENDERS

Vertical arrangement allows use in tanks with limited space ie. baffels or walls. All stainless body offers compatibility with harsh fuels, detergents and water and only one moving part means the sensing element is not exposed, ensuring significantly longer life compared to exposed variable resistor style senders. All reed switch senders include NBR gasket and weatherproof mating connector.

Note: 'LFW' - Low fuel warning - Normally open switch (N/O).

TIP:

PCD stands for Pitch Circle Diameter. It is the measurement of the circular centre line of all mounting holes. PCD can be estimated by measuring the distance between two adjacent holes (S). For 5 holes, multiply this value by 1.7012. For 6 holes, multiply this value by 2.

NOT SURE?

VDO Gauge Check can be found on page 52. Handy workshop tool used to test gauges and measure variable resistance required for replacement senders. Simply connect to the sender terminals and use the dial to simulate gauge movement. Resistance can then be recorded to help match with the correct replacement sender.

Part No.	Description
DT2234/36TAPE	Spare Reflective tape for phototach

Gauge Check

Part No.	Description
105.001	Tester for resistive gauges 2-500 ohms

Used to check functionality and confirm the resistance range of most gauges for more accurate sensor matching.

*Not suitable for capacitive, bi-metallic or 0-5V systems.

TYRE PRESSURE GAUGE

For the conscientious driver who likes to retain a consistent Tyre pressure. Supplied in a handy leather pouch. Dual scale bar/psi.

Tyre Pressure Gauge

Part No.	Range
150.050	0 - 4.5bar (0 - 64psi)

GLOBES & HOLDERS

T10 Wedge Globe & Holder to suit most Cockpit Vision & International Gauges

Part No.	Description	Specification
800005002*	12V Globe & Holder	12V 3W
800005003*	24V Globe & Holder	24V 3W

Note: 52mm Level, Pressure & Temp gauges use 1x 3W globe

80, 85, 100mm Speedos & Tachos use 2x 2W globes

GAUGE MOUNTING HARDWARE

Suitable for Vision range of instruments.

Clamp Rings & Stud Kits	
Part No.	Description
800.005.015	Spin lock clamp ring for 52mm instruments
800.005.005	Spin lock clamp ring for 80mm instruments
800.005.006	Spin lock clamp ring for 85mm instruments
800.005.007	Spin lock clamp ring for 100mm instruments
600.402	Stud kit for 52mm electric gauges (not for speedo, tachometer, ammeter or pyrometer)

Spin lock clamp 800.005.015

Stud kit 600.402

GAUGE MOUNTING BRACKETS

Suitable for 52mm instruments.
