The Leaders in Product Checking Systems

Product Range

Product Development Milestones – PCS division

METAL DETECTORS

Gravity Feed Metal Detector

Used to detect metal contamination in powders / granules / spices

Conveyorized Metal Detector

Used to detect metal contamination in packaged products

Combo – Metal Detector + Deduster

Used in Pharma Industry for tablets

Pharma Metal Detector

Used in Pharmaceutical Industry for detection of metal contamination in tablets and capsules

Metal Detector

Metal Detector is an equipment to identify foreign object contamination prevalent in food, pharmaceutical and cosmetic industry. Metal detectors are traditionally used as a first line of defence in detecting ferrous, non-ferrous and stainless steel contamination in packaged food products, tablets, capsules, soaps, detergents, powdered products, spices, granules, etc. before these products leave the manufacturing / processing plants.

Metal Detector – Important Features

Digital Signal Processing

Digital signal processing for accurate adjustment of phase angle – To minimize the product effect and get the optimum metal detection sensitivity.

Auto Product Tracking

The machine tracks the product phase to compensate the product variation thereby eliminating chances of false rejection during inline production

Fail Safe Mechanism

Safety interlocks to ensure proper and fail safe separation of metal contaminated product from the good product.

Auto Product Learning

Adjusts the product signal and product threshold automatically. Different settings can be stored in memory for multiple products

E-Signature

To validate the Metal Detector with standard test piece. Standard test piece are calibrated spherical balls of desired size.

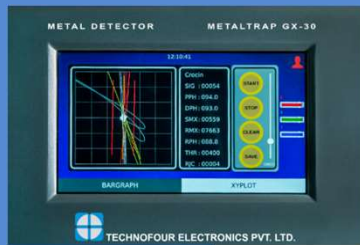

Event Time Stamping

Real Time stamping of event logs available

Metal Detector – Gx Series–Additional Features

Gx Series :- New generation series of Metal Detector with highly advance electronics/software features.

- Intuitive graphical user interface
- Real time X-Y plot
- 64 bit processor
- Ethernet connectivity
- 16GB data memory expandable to 64GB
- IIoT compliance
- Finger print sensor (optional)
- 5 years data storage memory
- 7” display

Important features for Pharma Industries

- **FDA 21 CFR Part 11 compliant**
- **Multilevel password**
- **Finger print sensor (optional)**
- **Dual frequency version for iron tablets / capsules available**

Linear Checkweigher

For weighing in a range of 100gm. To 20Kg.

Revolving Checkweigher

Typically used for weighing aerosol cans, vials, ampules

Combi-Checker

Combination of Checkweigher and Metal Detector

Checkweigher – Important Features

- Modern graphical user interface
- FDA 21 CFR part 11 compliant
- Informative dashboard
- Multi-weight classification
- Inbuilt report generation – complete statistical data
- Ethernet connectivity
- Interface with other machines
- Multi-product memory

Dynamic Checkweigher

A Checkweigher is an automatic dynamic weighing system for checking the weight of a given product. It checks, classifies and rejects Underweight / Overweight products and prevents them from reaching the customers.

Our Checkweigher uses the state of the art technology to achieve greater accuracy in dynamic weighing of your products. The system provides 100% online weighing of your product ensuring compliance with international standards of Pharmaceutical, Food, Chemical and Cosmetic Industry.

Linear Checkweigher – Models & Specifications

Model	Weight Range (gm)	Least Count (gm.)	Accuracy (gm.)	Max. Speed (p.p.m.)
CW 1200	01 – 1000	0.1	+/- 0.20	120
CW 1200 HSA	01 – 1000	0.1	+/- 0.20	350
CW 600 HSA	0.5 – 500	0.05	+/- 0.15	400
CW 3000	02 – 2000	0.2	+/- 0.40	120
CW 3000 HSA	02 – 2000	0.2	+/- 0.40	350
CW 5000	05 – 5000	0.5	+/- 2.00	100
CW 21K	20 – 20000	2	+/- 6.00	50

Shipper Carton Checkweighers

CW 21K / 30K for product weight upto 20 / 30Kg,
with Roller Conveyor

CW 6K for product weight upto 5Kg,
with Roller Conveyor

Options available with
PU / Fabric belt
conveyors, Modular
Chain belt , Roller
Conveyors

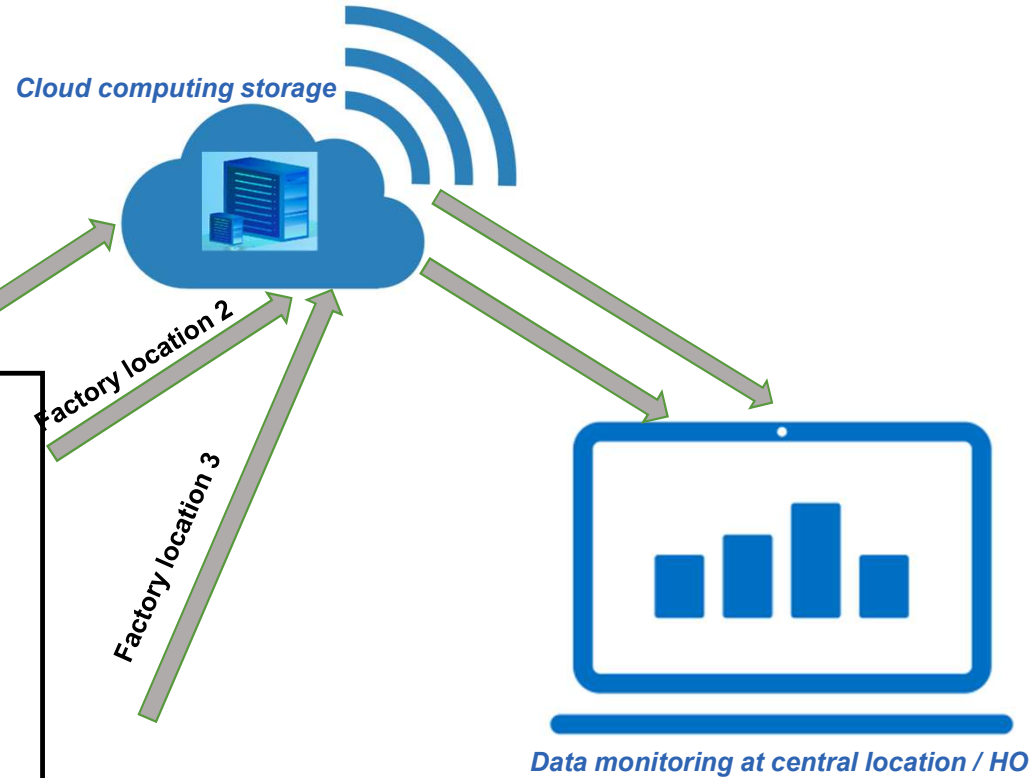

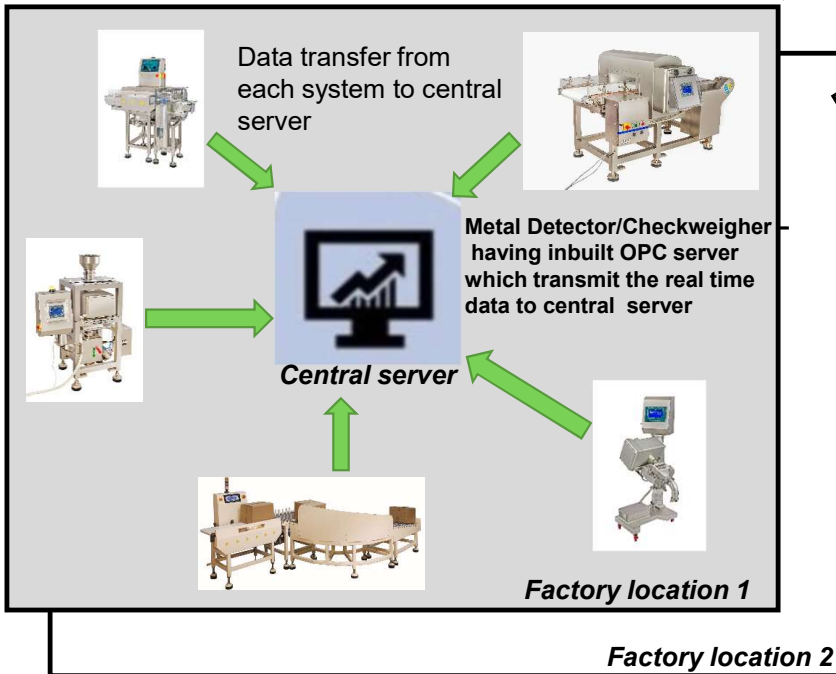

CW 60K for product weight upto 50Kg, with Belt
Conveyor

Industry internet of things (Industry 4.0) – TEPL Solution

Central server will have OPC client which will collect the data from all systems and will display in SQL format which will be used for further analysis

Sales & Service Network

Factory

Company Sales Engineer: 08

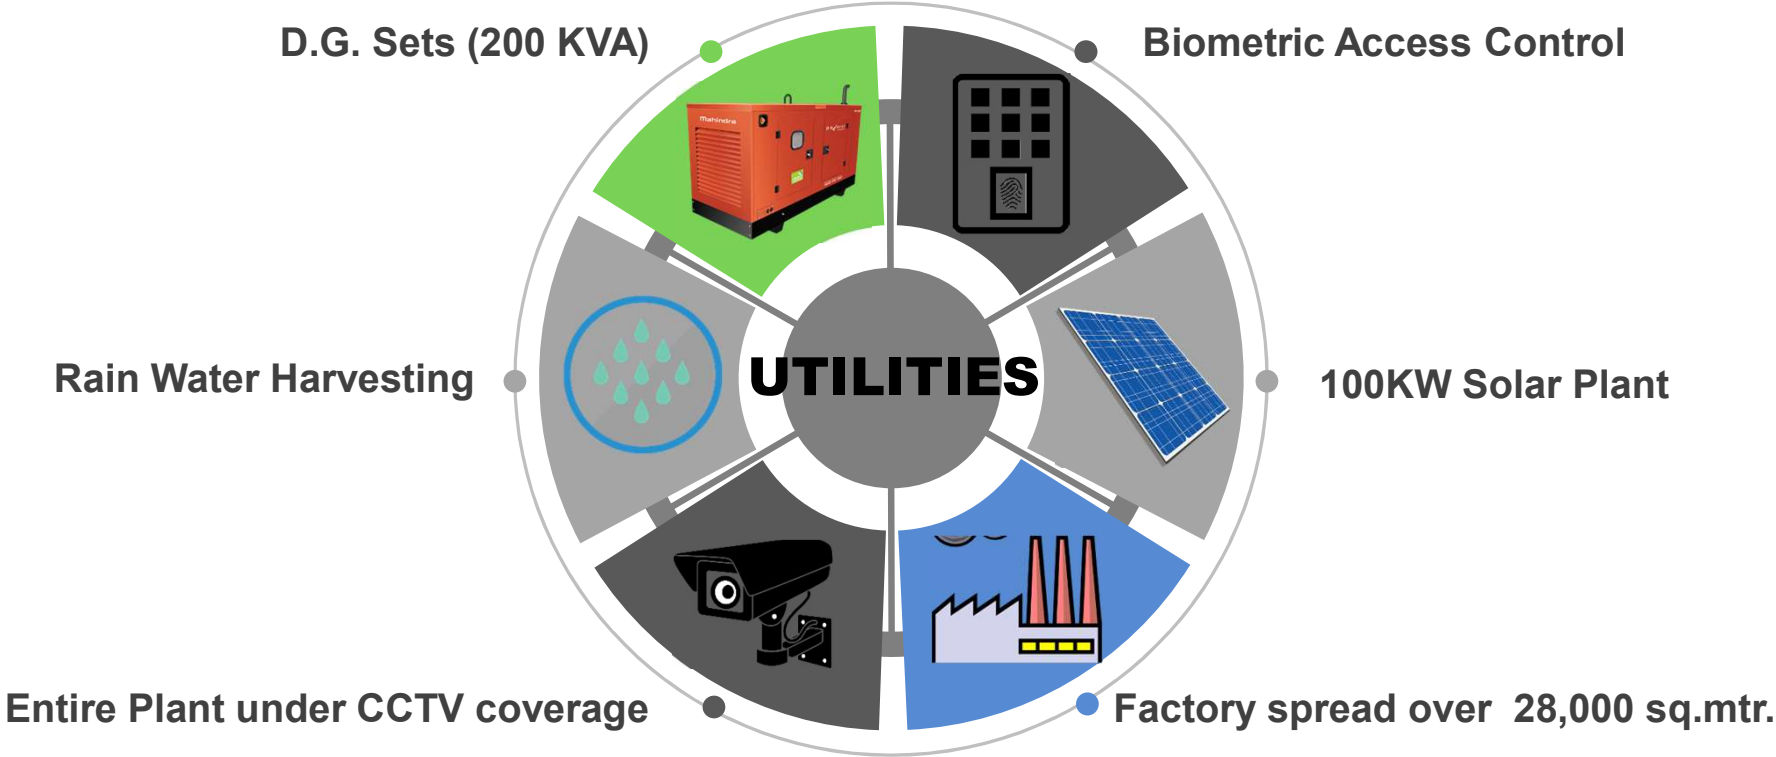

Authorized Sales Agent: 04

Company Service Engineer: 14

Infrastructure

Core Competencies

NDT Equipment

More than 300 man-years of experience in development of Non Destructive Testing Equipment (NDT) in India with a focus on Eddy Current Testing.

Product Checking Systems

More than 400 man-years of experience in development of Product Checking Systems like Metal Detection Systems, Dynamic Checkweighers & Carton Handling Systems

Customers

- ❖ More than 800+ happy & satisfied customers in India and globally and counting...
- ❖ More than 18000+ installations in India & globally and counting...

Market Share

- ✓ More than 50% market share in NDT Eqpt. In India
- ✓ More than 40% market share for PCS in India
