- Cloud foundations
- Support Op Model

Cybersecurity

- Vulnerability assessment
- IDAM Tool selection

Data Science & Analytics

- Business Intelligence (dashboards)
- Master data management

Sunipro.

Struggling to meet your organizational targets?

Sunipro is an advisory firm with over a decade of experience in the energy industry. We've helped our clients improve their operational efficiency by implementing secure and modern technology solutions.

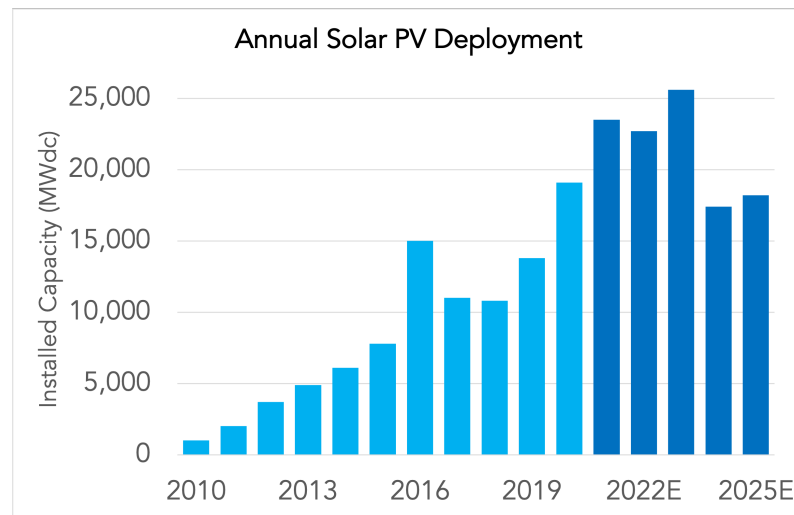

Problem: Rapid Growth leading to Increasing Inefficiencies and Overhead

The exponential growth in the solar industry over the last decade (42% YOY) has resulted in multiple operational and strategic challenges:

- Financial reporting errors
- Low quality project management
- Increased probability of cybersecurity breaches
- Information isolated in silos
- Incompatible/outdated software
- Inventory mismanagement
- Procurement issues

Clients that have found value through Sunipro's advisory and solutions typically fall into one of two categories:

- Growing companies that want to gain better control over their projects, job costing, and field services
- Larger corporations that want to graduate to using a world-class ERP tailored for the solar industry.

Perhaps your current technology stack is holding you back.

ERP Assessment Process

Function	D365 OOTB	D365 Cust.	Solar Success OOTB	Solar Success Cust.	SAP Business One OOTB	SAP Business One Cust.	Vendor	Recommended Vendor and Rationale Post Customization
Origination / MBA	4	5	4	5	2	3	D365 S5	• Current use of D365 CRM will facilitate integration to D365 FO • Highly configurable CRM plus advanced document management protocol that will streamline the acquisition process • High customization required to align with solar industry's details
Structuring	3	3.5	3	4	2.5	3	D365 S5	• Considerable customization required to cater to solar specific needs • S5 DOE Orange Button protocol streamlines financing and reporting leading to lower borrowing costs • Considerable customization required to cater to solar specific needs
Development	4	4	3	4	2	3	D365 S5	• Can easily take customized D365 CRM objects into D365 FO • OOTB features increase process efficiency, documentation, analysis • Provides robust BI tool, but requires 12-18 month customization
Finance / Valuations	4	4	5	5	3	5	D365 S5	• D365 FO provides robust reporting and integrates into D365 CRM • Advanced reporting capabilities allow like kind projects to justify project model statistics • Has basic cash on hand report, but will require high customization to meet solar investment community needs
Accounting	4	4	4	5	3.5	5	D365 S5	• Requires configuration to handle multi-level entities • Integration with AkodEnergy automates PPA and REC invoicing and reporting • Can handle multi-level entities, but needs customization to handle energy credits and reports
Operations & Engineering	2	2	4	5	2	3	D365 S5	• Requires high level of customization to achieve solar specific needs • Project management module tailored to solar industry providing immediate ROI • Requires high amounts of customizing to make fields meet solar specific needs
Subscribers	1	2.5	2	4	1	2.5	D365 S5	• D365 will need to be customized to import Hansen specific data • Can easily integrate with Hansen via Citrix platform • Will require high level of customization to integrate with Hansen as no such 3rd party integration exists
Asset Management	2.5	3.5	4	5	2	4	D365 S5	• Very limited canned reports for solar specific needs which will require add-on reporting tool • New reporting module introduces new capabilities of merging different asset management reports • Will have to customize using defined layouts for solar specific needs
Legal	4	5	3	5	1	5	D365 S5	• Can easily integrate D365 CRM data into D365 FO • Advanced document management protocol and DocuSign integration • Has basic document management capabilities out of the box, but requires customization to tailor

Sunipro's customized assessment methodology provides you a clear view of your current technology gaps through a rigorous evaluation and scoring process.
