Hair Removal

*The EXCELIGHT®
uses Dynamic Reflex
Technology for
comfortable, safe and
effectiveness hair
removal treatments.*

- Proven safety record
- Suitable for dense, coarse hair
- Effective results for a range of skin types
- World-leading technology

How does light-assisted hair removal work?

The light emitted by the device is absorbed by melanin within the hair, which is then converted into heat energy and damages the hair follicle.

What does the treatment feel like?

Treatment sensation varies but you can feel what is described as the 'hot flick' of an elastic band during treatment. However, thanks to Dynamic Reflex Technology, most clients describe the discomfort as moderate and tolerable.

How many sessions will I need?

The number of sessions required varies from client to client and is dependent on many factors.

Results can be seen after just a few treatments. However, a minimum of 6 and up to 12 treatments, are recommended to deliver the best results.

Who is suitable for treatment?

Most people are suitable for treatment. We recommend a consultation with your clinician to ascertain if the treatment will be successful for you. Grey/white hair has no melanin so is not recommended for treatment.

Skin *Rejuvenation*

A solution for all the visible signs of ageing caused by sun damage, including brown spots (pigmentation), redness (thread veins), uneven skin texture, lines and wrinkles.

- Proven safety record
- Suitable for vascular lesions, pigmentation, skin tightening and wrinkle reduction
- This treatment can be used in combination with illumiFacial®

How does light-assisted skin rejuvenation work?

Pulses of light are emitted to target discolouration (brown and red lesions) to create a more youthful, even complexion. In addition, the light energy stimulates the fibroblast cells, leading to increased production of new collagen and elastin. This improves the texture of the skin, evening out lumps and bumps whilst reducing the appearance of lines and wrinkles.

What does the treatment feel like?

Treatment can be mildly uncomfortable, but no anaesthesia is required. Most people describe the discomfort as moderate and acceptable, not unlike a quick pinprick. You will also experience a warm sensation.

How many sessions will I need?

Results can be seen after just a few treatments. However, a minimum of 3 and up to 6 sessions, are recommended depending on your skin concerns.

Treatments are carried out every 4 to 6 weeks. Following your course of treatments, top-up sessions are performed as required, usually once or twice a year.

Who is suitable for treatment?

Most people are suitable for treatment. We recommend a consultation with your clinician to ascertain if the treatment will be successful for you.

Pigmentation

Pigmented lesions, such as sun spots, age spots and freckles, that are caused by sun damage can be successfully removed, creating a more flawless, youthful and glowing appearance.

- Proven safety record
- Reduce one of the key signs of ageing
- Suitable for age spots, liver spots, sun damage and more
- World-leading technology

How does pigmentation removal work?

Short pulses of light are released and are readily absorbed by the high concentration of melanin found within pigmented lesions. The rapid absorption of light energy heats the melanin and causes the destruction of the melanin-rich cells. This triggers the body's natural healing process to stimulate the growth of new, healthy skin tissue.

What does a laser treatment feel like?

Most patients describe the discomfort as mild and tolerable and no anaesthesia is required.

How many sessions will I need?

The number of sessions will depend on the type and size of the pigmented lesion, but typically a minimum of 3 and up to 6 sessions are recommended.

Treatments are carried out every 4 to 6 weeks. Following your course of treatments, top-up sessions are performed as required, usually once or twice a year.

Who is suitable for treatment?

Most people are suitable for treatment. We recommend a consultation with your clinician to ascertain if the treatment will be successful for you. Large, dark, mottled or raised pigmentation cannot be treated and may need to be checked by a dermatologist. Large, dark moles should not be treated, nor should lesions covering a large part of the body. The pigmented marks that respond the best are superficial lesions such as those caused by sun damage (sun spots, age spots) and freckles.

Acne

*Combat inflammation,
and reduce the severity
and frequency of
breakouts, whilst also
diminishing redness
and pigmentation.*

- Proven safety record
- Suitable for active acne and superficial scarring
- Effective results for a range of skin types
- World-leading technology

How does the laser treatment work?

Light emitted directly targets the overactive sebaceous glands, greatly reducing the total number and severity of active lesions. This lessens inflammation and frequency of breakouts. The light stimulates the production of new collagen to improve skin texture, scarring and can also reduce the appearance of red or brown areas of skin that are often associated with acne breakouts.

What does the treatment feel like?

Treatment is mildly uncomfortable but there is no need for anaesthesia and the procedure is actually quite quick. Sensations vary but most people describe the treatment as feeling like a very quick, hot pinprick.

How many sessions will I need?

The number of sessions required varies from client to client and is dependent on many factors. Though results can be seen after a few treatments, a minimum of 4 and up to 8 treatments, at 4-week intervals, deliver the best results.

Who is suitable for treatment?

Almost everyone can be treated, apart from tanned individuals. If you are pregnant or taking Roaccutane (an acne medication) it is best not to undergo treatment until you have been off the medication for a minimum of 6 months.

Facial Blood Vessels

We can provide a long-term solution to facial concerns such as red flushing (rosacea), thread veins and red spots. Your skin tone will appear more even and the complexion healthier and brighter.

- Proven safety record
- Suitable for a range of vascular lesions
- Treatment sessions are very fast
- World-leading technology

How does the treatment work?

Light energy is applied to the skin where it is readily absorbed by blood vessels, heating them to a point where they are destroyed. Following treatment, the vessels quickly clear as they are reabsorbed by the body, leaving little or no trace of the original lesion.

What does the treatment feel like?

Treatment is mildly uncomfortable but there is no need for anaesthesia and the procedure is actually quite quick. Sensations vary but most people describe the treatment as feeling like a very quick, hot pinprick.

How many sessions will I need?

The number of sessions required varies from client to client and depends on many factors, however, a course of treatments is recommended. Though small lesions may clear in just a single session, a minimum of 3 and up to 6 treatments, at 4-week intervals, deliver the best results, depending on the skin concern.

Who is suitable for treatment?

Most people are suitable for treatment. Best results are obtained for lighter skin types. We recommend a consultation with your clinician to ascertain if the treatment will be successful for you.

*illumi*Facial®

Enhance your natural filter... Everyone is using filters to achieve the appearance of airbrushed skin. With illumiFacial® you will no longer need to apply a filter. Together we can rejuvenate, enhance, and illuminate your skin's natural beauty.

- Proven safety record
- Dramatically improve skin tone and appearance
- Help your skin look and feel its best
- World-leading technology

How does the illumiFacial® treatment work?

The illumiFacial® is a 4-stage treatment

Step 1: Cleanse

Step 2: Tri-Fruit Acid Peel

Step 3: Lynton IPL

Step 4. Hydrate and protect with a trio of serums

What does the treatment feel like?

illumiFacial® is a very quick, comfortable treatment which is designed to provide you with 'optimum skin health'. Some people will feel a slight tingling sensation when the fruit peel is first applied, but it very quickly subsides. The IPL aspect of this treatment can sometimes be mildly uncomfortable - most people describe the discomfort as feeling 'warm' and 'like a quick pinprick', all of which is very tolerable.

How many sessions will I need?

The number of treatments required varies. Results can be seen after just one session. However, a minimum of 3 and up to 6 treatments, at 4-6 week intervals, deliver the best results, depending on the skin concern.

Who is suitable for treatment?

Treatment is perfect for anyone whose skin exhibits congestion, discolouration and visible signs of ageing. This treatment will improve the appearance, texture and health of your skin.

What should I expect after illumiFacial®?

You may experience a superficial tingling feeling on the skin and you may see a darkening of pigmented spots before they flake away. This means the treatment has worked, providing you with a more even, flawless and brighter skin tone. Following your treatment, you will notice clearer, healthier skin and you will also experience an ongoing improvement to the firmness and plumpness of your skin. This is because new collagen is stimulated deep within the skin tissue in the months after treatment.
