

A healthy immune system is pivotal to staying well. How the body is prepared for and responds to various infections as well as vaccination events can be monitored with DITI.

Taking control of your health

Have you been feeling under the weather but can't identify the cause?

An important part of a **preventative and monitoring strategy** is working with your health care provider to address issues that could be compromising your immune health.

Now more than ever we must do everything possible to build and maintain our autoimmune system to its peak function.

For information and to book your appointment contact:

- + By helping our immune systems to function at optimum levels we can minimize the symptoms of infections and diseases and benefit from quicker recovery times
- + An effective way to help monitor your immune system and response to viral infection or vaccine therapy
- + Supports a proactive and preventative approach
- + Weakened immune systems are more susceptible to disease such as Covid-19

How good is your Immune Health?

Early detection saves lives

Helping understand Immune Health with Digital Infrared Thermal Imaging

This test does not diagnose Covid-19 or vaccine related issues, this report is to assist your healthcare practitioner as part of a preventative program aimed at improved immune function.

How does it work?

Digital Infrared Thermal Imaging DITI provides a non-invasive 'Risk Assessment' for people who may be at higher risk for post covid or post vaccine symptoms (long covid).

DITI has the ability to evaluate and monitor many of the markers relating to autonomic dysfunction and other burdens on the immune system.

BOOK YOUR DITI IMMUNE HEALTH ASSESSMENT TODAY

Case Studies

An immune health study can be a first level indicator of physiological changes relating to existing or developing autoimmune dysfunction.

Evidence of vascular inflammation can be linked to long term increased risk of blood clots and stroke.

Symptoms of fatigue, muscle and joint pain can be correlated with autoimmune dysfunction and susceptibility to long term symptoms.

Loss of temperature gradients is a strong indicator of immune dysfunction.

How the body is prepared for and responds to various infections as well as vaccination events can be monitored with DITI.

- No radiation
- Non-invasive
- FDA cleared imaging systems

Who is the procedure for?

Vulnerable or higher risk adults with underlying medical problems such as cardiovascular disease, diabetes, chronic respiratory disease, and cancer are more likely to suffer with the effects of post viral and vaccine syndromes that can be difficult to diagnose.

DITI can help patients and healthcare providers confirm diagnosis and play an important part in recovery.

Are **you** suffering from:

- + TIREDNESS & FATIGUE
- + SHORTNESS OF BREATH
- + CHEST PAINS OR TIGHTNESS
- + HEART PALPITATIONS
- + DIFFICULTY SLEEPING
- + DIZZINESS
- + JOINT OR MUSCLE PAIN
- + PINS & NEEDLES
- + RASHES
- + DIFFICULTY CONCENTRATING
