

Existing Controller Drive Upgrades

Drive Failure? Don't Scrap the Whole Controller!

Save Time AND Money!

- VCI Controllers usually outlast their drives – often by 10 to 15 years!
- Replacing the original drive with a state-of-the-art AC or DC drive costs a fraction of the cost of a new controller, and your installation time is dramatically reduced!
- Drives are expertly matched to your system by the same engineers who designed your controller!
- VCI can normally have your customer back in service in a week or less – much faster than the time required to purchase and install a new controller!
