

Global Levels of Consciousness by Country: September 2023

The collective souls of each country.

In this article we use Resonance Testing to measure the average levels of consciousness (Dr David Hawkins' Scale of Consciousness from 0 - 1000) for the entire global population and for most larger countries and regions for September 2023.

Global Levels of Consciousness by Country: September 2023

Global Average is 803

In January 2019 before everything appeared to turn upside down in the world, the average level of consciousness on the planet was 212.

By Continent/Region and by Country

Please note:

1. *Averages are not equivalent to a standard mean but a weighted mean. As people's levels of consciousness increases, their influence increases on a non-linear scale (like an exponential relationship).*
2. *Also worth noting is that the increases in levels of consciousness both in the individual and collective are observed as being non-linear, meaning that a test result may increase by several points or even more from one day to the next.*
3. *The big news this month is that our world is now resonating at a collective level of consciousness of over 800 points! This is absolutely amazing considering when we started testing the global level of consciousness was 484.*
4. *On the US continent, the biggest change has been in El Salvador that has seen its average levels of consciousness increase by a massive 54 points to 636, the level of peace. Joining them at this level is Belize at 602. Nicaragua has also experienced a large increase and is almost resonating at the level of love having risen from 456 in July to 499 in September. Interestingly, Alaska has also experienced a large increase, rising by 30 points to 582.*
5. *In Europe, the UK which in July saw its average levels of consciousness shooting up to over 800 has this month dropped down to 754. We wonder if this is because there was one person in the UK who resonated at 10,000 in July and whose levels of consciousness fell to just over 2,000 in September. In the rest of Europe, Spain has just come into the level of peace at 601 and Bulgaria is now resonating at 501, the level of love.*
6. *In Asian, Bhutan is now - incredibly - resonating at 927; a 12 point increase from July's report and the country with the highest level of consciousness in the world.*
7. *In the Middle East, Kuwait has experienced a significant 35 point rise reaching 287 and Bahrain continues to increase; this month rising to 235 from 222. Both of these countries are resonating well below the average for the region of 631 but these large rises may mean that they are starting to catch up with the rest of the Middle East.*
8. *The African continent has risen by 8 points with the bigger country increases clustering in North and West Africa. Those of you who follow this series may have noted that neighbouring countries often have very similar average levels of consciousness and rise at the same rate.*
9. *There has been little change in South American levels of consciousness since July but notably Ecuador, is now at 898 and touching distance of a collective level of consciousness of 900. To understand how incredible this is, Ecuador's collective level*

of consciousness was just 499 back in November 2021! Armichi Wellness never thought we would be experiencing such high levels of consciousness when we first started these reports. This is why there is no distinction in the key for levels of consciousness 700 - 1000; we simply didn't think any country would reach these levels!

10. Finally, it is with sheer delight that we have seen the Australian continent's average levels of consciousness rising to 723; the level of sages and, more importantly, both the countries of Australia and New Zealand are now resonating at the level of peace. We note how the collective levels of consciousness in the Australian continent are now far surpassing those of the Middle East, when for many months they remained at very similar levels.
11. For transparency, the results tested as being accurate for all countries to within 3 points on 19th October 4.07pm.
12. The tester's average level of consciousness when conducting these tests was 8,228.
