

The Brand-New Quality Monitor System

We seriously to Introduce the Monitor System. The company took the lead in using the latest technology combined with modern management concepts developed for the industry to use the quality control system officially put into service. Its core means for the use of Digital Video Recorder on the process throughout the distribution, all records file for future reference. This is a promotion to the distributor for his honesty and self-discipline better than the effect of on-site supervision, can improve the customer's confidence in the use of the company's services. For the distributor, the serious work of the case can be investigated, but also improve their awareness. Video information can deliver efficient result to shorten the cycle of the training of professional distributor, improve and ensure the quality of work effect is obvious. The other new quality monitoring tool is: the use of mobile application MapMyWalk for instant tracking, increase the on-site "cross checking" operability, so that our customers more at ease. Coupled with the traditional use of the GPS Track record file report, the customers experience the full value of the service. The quality control system is fully implemented in the Letterbox Distribution Industry and is now being promoted in your area. Welcome to our service and make our comments.
